

# How it Works and What to Expect

## **Insect attraction:**

Many insects such as House Flies, Fruit Flies, Moths, etc. are attracted to light.

Certain insects like mosquitoes are not attracted to light, but instead, are attracted to carbon dioxide (the air we exhale.)

## **This is how the X-Vector works:**

**Mode I** turns on the LED lights and the vacuum: The LEDs attract any insects that are attracted to light but the vacuum sucks in any insect that flies close to the X-Vector and traps them down in the drawer.

**Mode II** turns on the LED lights, the vacuum, and the bug zapper: In addition to the LEDs and the vacuum, the bug zapper will instantly kill any insect that touches the metal poles.

## **Run the X-Vector in one location and use the 8th day as a check point:**

Do you still see insect activity on this day? Has the issue diminished at all? If the problem has improved; great, please continue to use the device in its current location.

If the insects are still a **major problem**: Try to determine if the device is as close to the problem area as possible. Check for any nearby lights that can be turned off. You might also consider using more than one device for greater effect.

## **Use the 16th Day as your last checkpoint:**

Has the issue diminished? If not, then it's time for us to help. Please Contact Us and we will move to what we like to call our *Stage II* worth of help: **Free of Charge**.

As a company, we are here to help solve the tough insect issues.

## **Ways to Contact Us:**

- 1) If **Ordered Online**, it's **"BEST"** to **Contact Us** via the **website you ordered from** (e.g., Amazon, Walmart, Sears, etc.)
- 2) Our Business E-mail: [info@cleanrth.com](mailto:info@cleanrth.com)
- 3) Local Phone: 1-480-255-5113  
Toll Free Phone: 1-855-707-7075

## **Tips and Tricks:**

Daylight and any light around the house can reduce the effectiveness of the LEDs; you will get your best results at night while your house is dark.

The airflow from the fan can be reduced as more and more insects are sucked into the drawer; please remember to occasionally empty the drawer.

Doors and rooms tend to contain insects to specific area. One X-Vector should be placed in each area where there is an insect issue for quickest and best results.
