

# TraumaFix® Dressing

Designed for major bleed trauma

**Major Bleed  
Technology**

**Immediate Pressure  
to Injury**

**Amazing Fluid  
Absorption**

## What do you have in your First Aid Kit to deal with a major bleed injury?

Ambulance dressings have their place, but they are not substantial enough to cope with a major trauma bleed, and applying enough pressure with a light conforming bandage will be near impossible. Abdo-pads might be substantial enough to cope with the bleed, but they need a suitable pressure bandage to attach them, which then needs to be secured. This is very time consuming, difficult with one injury, dangerous with multiple bleeds.

All too often, non-sterile sanitary towels are used as major bleed dressing pads. Typically these contain super-absorber powders that clot blood into a gel on contact. Just one grain of this powder has the capacity to cause a deadly blood clot if it were to ingress into the casualties venous system.

TraumaFix® offers a substantial, highly absorbent dressing pad, capable of holding over ten times its own weight in fluid. A strong bandage allows direct pressure to be applied quickly and maintained easily. This is secured instantly with a Velcro® style fastening.

Multiple major bleed injuries can be stemmed quickly, allowing the casualty to be moved easily. The dressing is a significant advance in the treatment of trauma injuries.

*Place highly absorbent dressing pad with pressure pillow over trauma...*

*Direct pressure is applied with 4.5m of pressure bandage...*

*The bandage is secured instantly with a velcro style fastening...*

*Major bleeding is stemmed quickly, allowing the casualty to be moved easily.*
