

# Charles Darwin

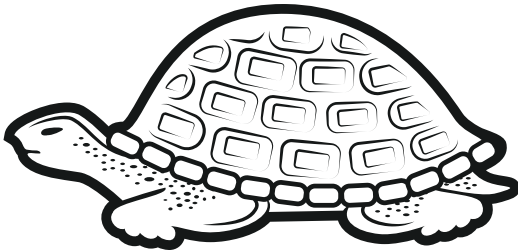

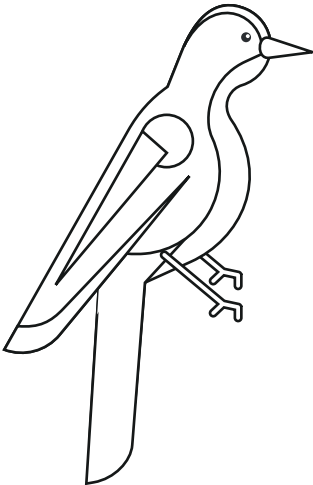

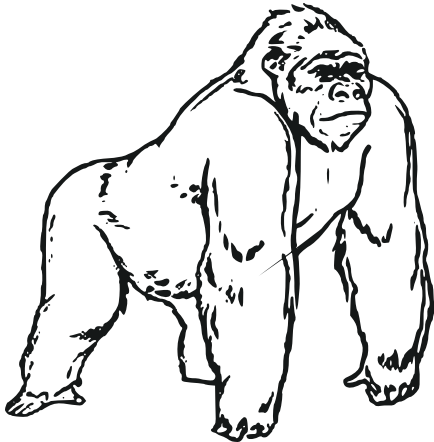

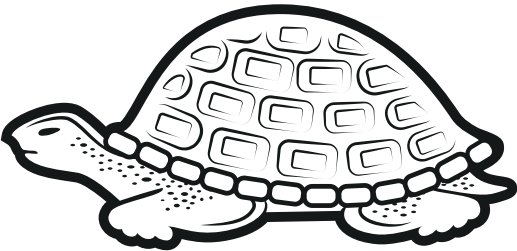

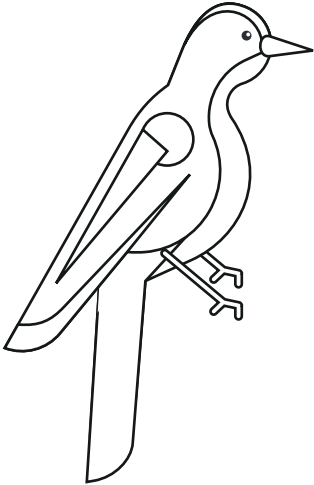

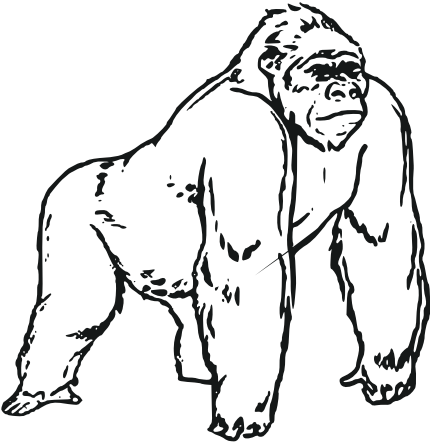

Darwin was born in England in 1809. He was a famous naturalist. A naturalist is someone that studies plants and animals in the places where they live. He traveled on a ship named the "HMS Beagle" to faraway islands to learn about plants and animals. He is best known for writing a book about evolution called "On the Origin of Species". The theory of evolution states that all living things on earth change over time. Darwin believed that living things change so that they can get better at finding food and staying alive. His theory of evolution continues to be researched and supported by scientists today!
