

Parallel Terence Woodgate

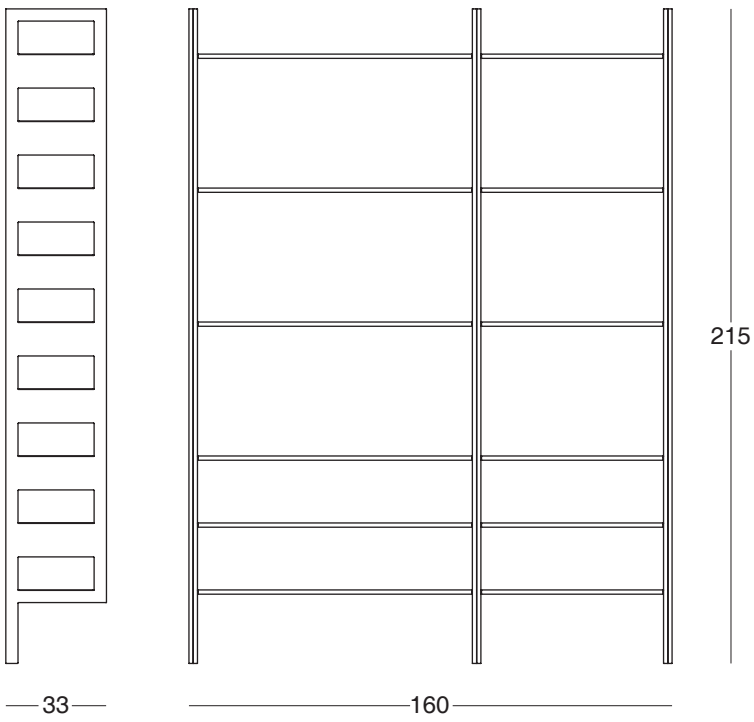

Parallel is a component shelving system made from pressed steel with a matt white powder-coated finish. Each shelving unit is made up from two components: the uprights and the shelves. Once the uprights are screwed into the wall, the shelves simply slot into position without the need of any fittings.

Woodgate has refined his original design slimming down the proportions to give the system more balance, proportion and effortless elegance. The Parallel shelving system can be extended to fit into any domestic or commercial environment. Shelves available in two widths.

Made in the UK.
