

# KUPER FWS 920

## Veneer Splicing Machine

D.B.P. and foreign patents

**KUPER**

# KUPER FWS 920

## Splicing veneers in small space.

### The new generation of Zig-Zag Veneer Splicing Machines.

Does it all, takes little space and is cost saving: The compact KUPER FWS 920 features the same technical advantages of the bigger KUPER FWS and provides the same efficiency – perfectly suiting craftsmen.

#### Small and economical.

The modern design of the KUPER FWS 920 is as convincing as the high feed speed for splicing veneers. The special gluethread developed by KUPER is applied so precisely that tight joints and high tear-resistance are guaranteed. Even with very wavy veneers! The standstill regulation reduces the temperature of the heater in standstill mode, so burning of the thread is avoided. The KUPER FWS 920 of course is as simple to operate as all KUPER Zig-Zag Veneer Splicers.

#### Advantages at a glance

- discs with tolerance compensating mechanism
- electrical heating system of industry machines
- standstill regulation
- electrical thread cutting roller
- automatic start by light sensor

#### Technical data

Throat depth	920 mm
Feed speed	approx. 20 m/min.
Veneer thickness	approx. 0.4 – 2.0 mm
Operating voltage	400 V, 3 PH, 50 cycl. or special voltage
Total connected load	approx. 0.97 kVA
Space requirement	approx. 1280 x 580 x 1470 mm

# Simply convenient: Veneer handgluers

## Easy handling, easy operation.

The KUPER hand gluer uses the KUPER glue thread as glueing medium. An ideal instrument to patch and bind splitted veneers. The KUPER KHL 2 is an ideal instrument to patch and join very buckled and thick veneer sheets. It applies 2 gluethreads in one operation.

## Advantages at a glance

- approx. 5 min. heating-up only
- exact, stright-line glueing
- precise cutting of the thread
- maintenance free

## Technical Data

KHL 1	working with 1 thread
KHL 2	working with 2 threads
Operating voltage	230 V AC
Net weight	1,34 kg 1,59 kg

**KUPER KHL 1**

**KUPER KHL 2**
