GMM non-stick coatings

PFOA FREE NONSTICK COOKWARE

We care for the environment and are always delighted to help you out with eco-friendly raw materials and ingredients in our manufacturing unit. In addition to promoting healthy cooking and offering protection from all kinds of possible harm, we manufacture PFOA-free, PTFE-free and all other toxic-free materials for our cookware for our beloved customers.

PFOA or perfluorooctanoic acid is a chemical used as an inner coating material in non-stick cookware with high resistance to heat, water, oil, and stains and is thus easy to clean. At normal cooking temperatures, PFOA-coated cookware releases various gases and chemicals that present mild to severe toxicity. According to the research findings, exposure to this chemical presents a risk of tumour growth in the liver, pancreas, and other organs and may increase the risk of developing multiple kinds of cancers. On the other side, it also has an adverse effect on the environment.

PRODUCTION LINES WITH CAPACITY

- Stainless Steel Cooker: 2500 pc/Day
- Aluminum Cooker : 5000 pc/Day
- Non-stick Cookware: 7000 pc/Day
- SS Utensils : 1000 pc/Day

DIECAST COOKWARE

Make delicious memories for a lifetime with the diecast cookware series. Distinctive by its exceptional durability and high heat conductivity, this cookware is here to stir a cooking revolution.

Diecast Cookware

This diecast cookware series is a healthier cooking choice for you. The granite coating is applied to the interior and exterior of the cookware set, which extends its life and ensures it is easy to use and maintain. The cast aluminium design is both lightweight & heat conductive while the cookware ensures high scratch-resistant durability.
