Assembly guide
Your trike comes packed into 3 separate boxes:

Box 1: Seat, battery, and front frame section

Box 2: Rear frame section with wheels, front basket, fenders, charger and accessory box (pedals and headlight inside)

Box 3: Front wheel and rear basket
Identify the hardware

- Rear fenders
  - Socket head bolts, pressure washers and safety nuts to connect front and rear frame sections

- Front fender
  - Socket head bolts, pressure washers and safety nuts for the front fender

- Rear fender brackets
  - Socket head bolts, pressure washers and safety nuts for rear fender brackets

- Pedals

- Chain

- Tail light

- Headlamp

- Bolts for the front basket x 4

- Black socket head bolts for the front basket

- Flat washers for the front basket

- Long screw and nut for the headlamp and front fender
STEP 1: Assemble the stem and handlebar.

A-Remove the protective cap and ring from the steering tube

B-Insert the stem into the tube. Use the spacer ring (arrow) to increase the handlebar height, for lower handlebar position you can remove the spacer ring.

C-Align the stem/handlebar in a straight position

Continues on the next page....
STEP 3: Assemble the stem and handlebar.

D-Secure the handlebar tightening the top screw with an allen wrench

E-Tighten the bottom clamp socket head screws with an allen wrench

F-Adjust the angle of the handlebar with the horizontal screw, once you reached the desired angle close the latch.
STEP 4: Connect the front and rear frame sections

Use the 6 socket head bolts and safety nuts to connect both sections but do not tighten yet, you will need to adjust the chain before fully tightening.
STEP 5: Install the front wheel

1-Remove the shipping axle from the front fork and dispose it.

2-Make sure to have the spacer washers (a) and safety washers (b) on both sides between the fork.
STEP 5: Install the front wheel

3-Insert the front tire into the fork, the disc needs to slide into the brake caliper.

4-Connect the motor cable on the right side of the fork.
STEP 6: Install the chain

1- Pull down the derailleur

2- Start loading one end of the chain from top to bottom around the first small sprocket (blue arrow) . . . then around the second small sprocket (green arrow) and finally onto the third small sprocket (red arrow) . . .

Continues on the next page . . .
3-Keep reeling out the chain towards the front. The chain should now be routed around all the gears.

4-Make sure the chain also wraps around the main sprocket.

Continues on the next page....
STEP 6: Install the chain

3-Link the chain together, insert the pin lock and secure using the chainbreaker (included)

4-Using a wrench # 17, tighten the 6 bolts that connect the front and rear frame sections.
STEP 7: Shifter cable

Follow the route for the shifter cable to connect it to the derailleur.

1-Insert the bare metal wire into the guide on the shifter

2-The wire will come to a stop once the rubber jacket hits the guide, tighten the security nut with a #9 wrench.
STEP 8: Brakes

1-Fix the calipers to the frame. Use the black sockethead bolts, 2 bolts per side.

2-Adjust the alignment, use the top screws on both ends of the caliper to adjust, make sure the wheel spins freely without rubbing the disc rubbing the caliper.
STEP 9: Front fender and headlight

1. Install together the front fender and headlamp onto the front fork hole

2. Secure both with the socket long head bolt

Attach the bracket to the front fender
STEP 10: Rear fenders and basket

It is highly recommended to attach the rear fenders to the rear basket before fixing the basket to the frame.

1- Fix the rear fender brackets to the rear basket
2- Adjust the angle of the brackets
3- Attach the rear fenders to the brackets with the short bolts

Continues on the next page...
STEP 10: Rear fenders and basket

Fix the rear basket with fenders to the frame using the long bolts with washers.

Secure from underneath with the safety nuts.
STEP 11: Rear tail light

Attach the tail light to the rear end of the trike.

Connect the trail light cable to the trike.
STEP 12: Battery installation

Slide the batteries into their rails under the basket

Push the batteries all the way in until they click into position

Connect the plugs of the battery rails to the main harness
STEP 13: Headlight

Plug the end of the headlight cable to the other end from the trike.

Tuck into the frame the excess cable.

Continues on the next page...
**STEP 13: Headlight**

**To turn your headlight on:**
1. Turn on your electric system by pressing and holding the M button for 3 seconds.
2. Press and hold the arrow Up button until the light comes on, you will see the light icon on the screen.
3. To turn off the light press and hold the Up button again. The light icon will turn off from the screen.
STEP 14: Front basket

Attach the front basket to the frame using 4 socket head bolts.
STEP 15: Pedals

From the accessory box, identify the left and right pedals. Fix the pedals to the crank, the left pedal is tightened counter clockwise, the right pedal clockwise.
Hand-tighten the pedals first, then use a wrench.
