

## READING CYCLOMETER REGISTERS

4-dial X 1  
register

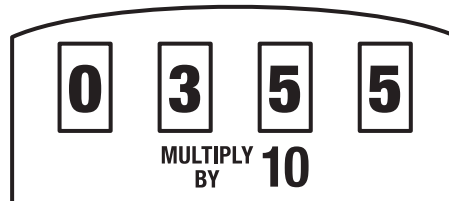

= 3550 KWHS

5-dial X 1  
register

= 3550 KWHS

4-dial X 10  
register

= 3550 KWHS

4-dial register  
"with lazy zero"

= 3550 KWHS

With the many different types of meters in use today, you may notice that some meter disks operate faster, or slower, than others. However, because the meter register ratios differ in the same proportion, all meters will show the same total for identical loads. The amount of electricity you've used is the difference between your last and present reading.
