

#### TELEGRAPH STOOLS

Our Telegraph Stools are made out of decommissioned timber power poles sourced from across Australia. Handmade and individually unique, these stools are suitable for use as a stool or side table, inside and outdoors.

#### MANUFACTURING INFO

By hand, we use a chainsaw to split each segment of log to form two stools in order to minimise any timber waste during production. We then blacken the surface of each stool to increase its durability before finishing using a natural hardwax oil.

#### SUPPLY CHAIN INFO

At any given time there are over 6,000,000 telegraph poles in use across Australia. Every year 200,000 of these are replaced due to 'ground line failure' where a small section of the pole becomes waterlogged. The rest of the pole is reusable however 80% of these are currently landfilled due to a lack of recycling incentive. Our telegraph poles are made from untreated species of hardwood sourced by our supplier Kennedy's Timbers.

#### CARE & MAINTENANCE

Wipe off dust regularly with a dry, soft cloth. Remove any marks with a soft cloth dampened in lukewarm water with a mild detergent. Never use abrasive cloths or detergents containing abrasives or solvents.
