

Drawer Installation Guide

DrawerBOX

Tools Required

- Cordless drill with adjustable torque settings.
- #2 Robertson (square drive) screwdriver or screwdriver bit.

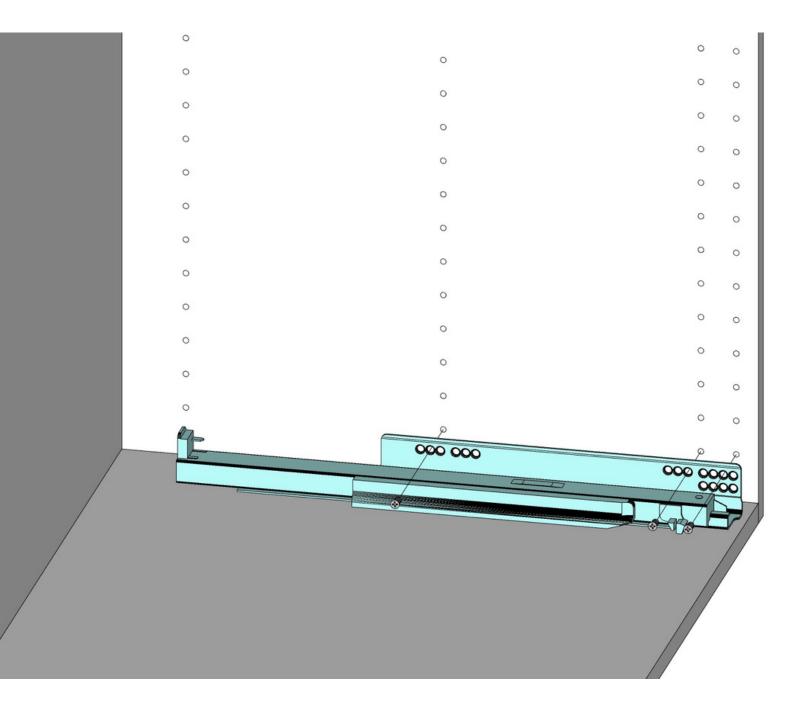

Inspect the Product

A friendly reminder to unwrap and inspect your Kitch products before assembly and installation.

If a remake is required, please take photos of any damages along with the label on the piece and email them to hello@mykitch.ca. We'll review and advise what the next steps will be for you. You have 15 DAYS from receiving your products to report these to us.

Kitch₁₀

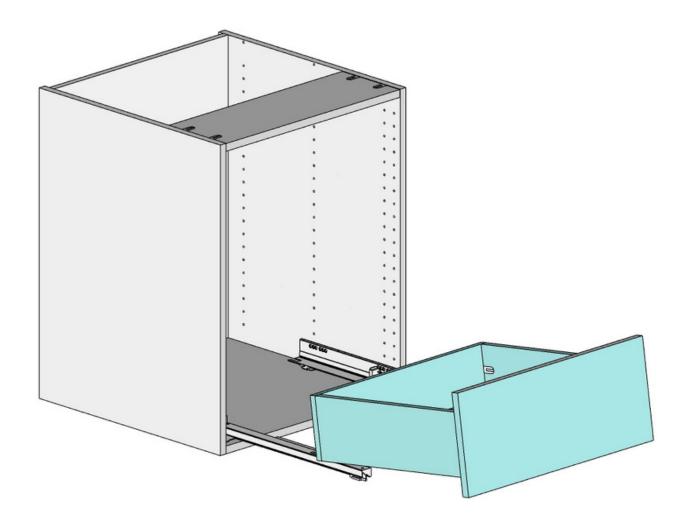

Step 1

For a bottom-positioned standard DrawerBOX, align your Drawer Guides with the first row of holes. With the euro screws provided, screw through the Drawer Guides holes 2, 5, and 12 into the cabinet gable.

Kitch.

Step 2

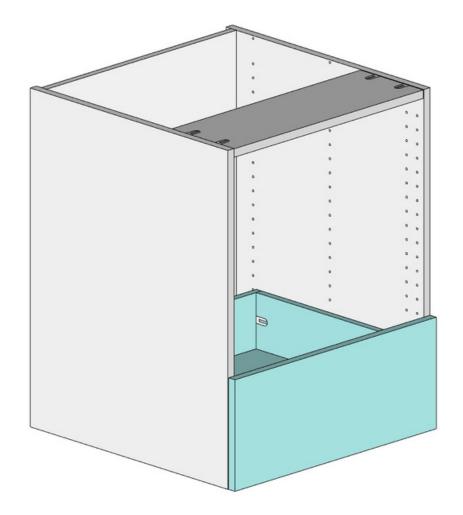

Pull the Drawer Guides out from the cabinet and align the DrawerBOX onto each of the guides. Push back into place until you hear a "click" sound.

Helpful hint: the locking devices provide adjustments once the cabinet has been installed to even out gaps. See how to install and adjust the devices <u>here</u>.

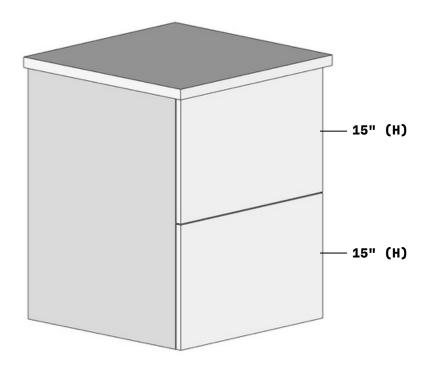

Kitch.

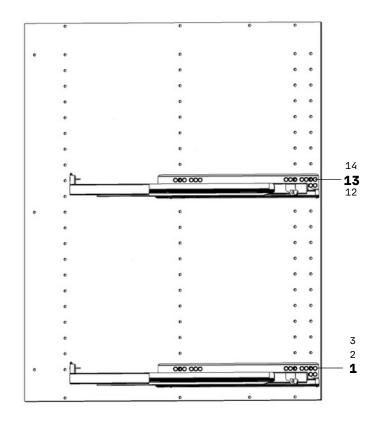

Step 3

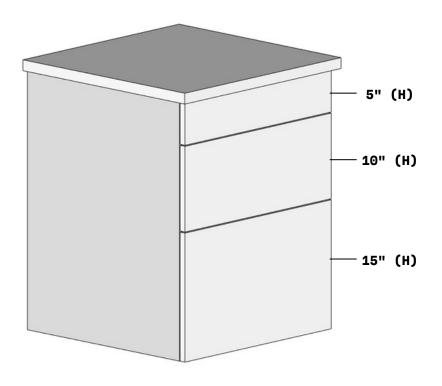

Your DrawerBOX is now installed.

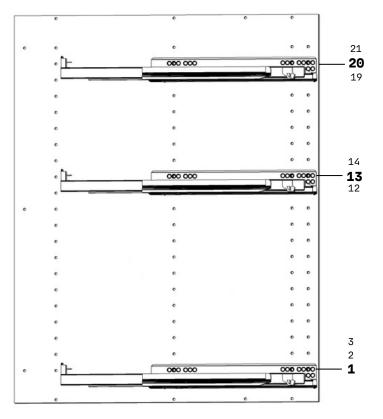

See some examples of common DrawerBOX configurations below.
