

OCCASIONAL STAINING - PORCELAIN EXTERNAL

Always follow manufacturers guidelines – these can be downloaded from the relevant product page on our website. We always recommend conducting a test in a discreet area prior to a full application of the product. Wear appropriate clothing and protective wear, such as gloves and glasses.

Porcelain pavers are extremely durable; however, it is recommended to maintain them correctly to keep them looking their best. There is no rule on the frequency, it comes down to usage and personal preference. Lithofin is our preferred brand for sealing and maintenance products. Their comprehensive range of products have been rigorously tested for their compatibility with both natural stone and porcelain for internal and external applications - as such we have used and sold Lithofin products to protect and maintain our products for over twenty years.

What you will need:

- Lithofin Outdoor Cleaner (approx coverage: 5 to 10m² per litre)
- Garden Sprayer
- Stiff Deck Brush
- Hosepipe

For stubborn dirt or stains (such as leaf tannins and berries), we recommend using the Lithofin Outdoor Cleaner, designed to remove stubborn dark deposits. Begin by testing the product on two affected tiles using the below method. If stubborn stains remain, please contact the technical team at Lithofin who will be able to advise further.

1. Use a garden sprayer (or pour directly onto the surface and move the product around with a stiff brush) to apply generously in undiluted form.
2. Allow the product to work for 2 to 10 hours depending on the stubbornness of the dirt deposits.
3. Brush the surface and rinse with clear water. In very stubborn cases, repeat this procedure.

Please note: test the product's suitability in an inconspicuous area prior to use. Shield treated surfaces from rain for approx 4 hours. Protect plants, textiles, metals, wood, etc. Do not rinse onto lawned areas. The product will damage these surfaces.

Lithofin technical helpline: 01962 732 126

Always keep pets and children away from any treated areas until the product has been removed.
