

REGULAR MAINTENANCE - NATURAL STONE INTERNAL

Always follow manufacturers guidelines – these can be downloaded from the relevant product page on our website. We always recommend conducting a test in a discreet area prior to a full application of the product. Wear appropriate clothing and protective wear, such as gloves and glasses.

Our range of natural stones are dense and hardwearing; however, it is necessary to maintain them correctly to keep them looking their best. There is no rule on the frequency, it comes down to usage and personal preference. Lithofin is our preferred brand for sealing and maintenance products. Their comprehensive range of products have been rigorously tested for their compatibility with both natural stone and porcelain for internal and external applications - as such we have used and sold Lithofin's products to protect and maintain our products for over twenty years.

What you will need:

- Lithofin Wash & Clean
- Microfibre Mop
- Sweeping Brush/Vacuum Cleaner

For the most part, maintaining your floor will involve either sweeping or vacuuming (soft attachment only to avoid scratching).

When mopping is necessary we recommend using the Lithofin Wash & Clean, designed to help maintain the Lithofin Stain Stop sealant as well as clean the natural stone tiles. Add one squirt (approx. 20ml) to a 10 litre bucket of warm water and mop as usual.

For the best results, use the following method;

1. Clean in small controlled sections (a few m² at a time).
2. Change the water regularly on larger areas.
3. Wring the mop out as much as possible to avoid dirty water pooling in the grout.
