

REGULAR MAINTENANCE - PORCELAIN INTERNAL

Always follow manufacturers guidelines – these can be downloaded from the relevant product page on our website. We always recommend conducting a test in a discreet area prior to a full application of the product. Wear appropriate clothing and protective wear, such as gloves and glasses.

Porcelain tiles are extremely durable; however, it is recommended to maintain them correctly to keep them looking their best. There is no rule on the frequency, it comes down to usage and personal preference. Lithofin is our preferred brand for sealing and maintenance products. Their comprehensive range of products have been rigorously tested for their compatibility with both natural stone and porcelain for internal and external applications - as such we have used and sold Lithofins products to protect and maintain our products for over twenty years.

What you will need:

- Lithofin Conditioning Cleaner (approx coverage: 2 L/100m² per month if used daily)
- Microfibre Mop
- Sweeping Brush/Vacuum Cleaner

For the most part, maintaining your floor will involve either sweeping or vacuuming.

When mopping is necessary, we recommend using the Lithofin Conditioning Cleaner, this mildly alkaline formula has been designed for regular use with porcelain and leaves a streak free finish on your tiles. Add one squirt (approx. 20ml) to an 8 litre bucket of water and mop as usual. For the best results, use the following method;

1. Clean in small controlled sections (a few m² at a time)
2. Change the water regularly on larger areas
3. Wring the mop out as much as possible to avoid dirty water pooling in the grout
