Before starting this kit, make sure you read through all the instructions carefully. Always remember to dry fit parts and sand as needed.

We use two kinds of glue when assembling our kits. Super glue (cyanoacrylate) or PVA glue.

You can repaint or weather our kits easily! The paint we use is a great base primer and will take paint nicely.

If you have any issues during assembly, please contact us and we'll always do our best to help. We pride ourselves on taking care of our customers, so if you need anything at all. we're here!

As part of the laser cutting process, some colors or sheets may have more laser dust/residue than others. This is due to a wide variety of reasons and its 100% normal.

If the smell bothers you, set the kits outside for a day or so. If the residue is getting onto your hands, use some gloves!

Some folks like to wipe the kits down with a very lightly damp rag.

IMPORTANT SYMBOLS YOU MAY FIND WHILE ASSEMBLING THESE KITS

ATTENTION: This is a specifically important step.

Working doors are a good

USE GLUE: This one isn't used much, as we assume almost all steps will have glue. But sometimes we use this for additional clarity

TRIM/SAND: Sometimes parts need to be slightly sanded, or trimmed in order to get the perfect fit.

DRY FIT: Sometimes we'll tell you to test fit items first. While we suggest doing this for ALL steps. Some are more important.
