PRECAUTIONS BEFORE USE

WARNING. Read all the safety warnings and all the instructions. Failing to heed warnings and follow instructions may lead to an electric shock, a fire and/or serious injury.

Keep all warnings and instructions for future reference. The term “tools” in the warnings refers to your battery powered electric tool (with power cord), or your tool operating on a battery (without power cord).

PROTECTION OF THE ENVIRONMENT

Observe all country-specific waste disposal rules and regulations.

- > Power tools must not be disposed of with household refuse.
- > The device, accessories and packaging must be taken to a recycling centre.
- > Ask the approved INFACO dealer for up-to-date information on the eco-compatible elimination of waste.

BOX CONTENTS

- Tying machine **A3MV2-12v**
- 12V battery pouch
- 12V battery charger
- Grease spray
- Tying head unlocking key
- Tool carry bag
- Pincers
- User guide

GENERAL PRODUCT VIEW

SPECIFICATIONS

	A3MV2 - 12 V
Rated power supply	12V
Weight of the machine alone	650 g
Battery autonomy	7000 attachments
Charging time	5 h
Opening diameter	30 mm
Available wire diameter	0,40 - 0,46 - 0,50 mm

These specifications are given as an indication only. Under no circumstances may they be considered as contractually binding. They are subject to modification without prior notice in the interests of product development.

Patented equipment

USER GUIDE

First use

We strongly recommend that you ask for assistance from your retailer, who is authorised to give you all the advice you need to use the machine properly and achieve a good output. **Please read these instructions carefully before using the machine.**

It will take a day's use to acquire a sound knowledge of how to operate the machine.

Charge the battery for at least 3 hours before starting your first day's work. (See chapter "Recharging the battery", P. 13).

Disconnect the machine from its battery for all operations apart from tying.

Always keep your hands well away from the tying head when the machine is in operation.

We strongly recommend that, for safety and practical reasons, you use the case provided for carrying the machine and the battery in the workplace.

Carrying the machine

- > Attach the belt around your waist.
- > Place the battery on your stomach side.
- > Hang the tool carry bag on your belt to store your spools and tools.

In wet weather, the battery belt must be worn under waterproof clothing to keep the battery unit dry.

Switching on

The tying head should be in the working position before switching on.

Connect the battery to the machine supply cable.

The machine is switched on.

- Short pressure on the switch will control only the wire cutting function.
- Sustained pressure will launch the complete tying cycle (See chapter "Making a tie", P. 11).

Loading the reel

The wire needs to be prepared to make it easier to feed through the machine.

- 1 Cut the end to obtain a wire with no bends in it.

- 2 Smooth the wire for at least 40 cm.

- 3 Clip the lever upwards.

- 4 Clip the reel on to the machine between cheeks.

5 Insert the wire into hole.

If you come up against an obstacle during insertion, move the wire gently backwards and forwards and/or press once or twice the control switch to pivot the tying head and to keep the wire moving through the machine.

6 Keep on feeding the wire through until it emerges from the tying head.

If the wire still doesn't come out: we recommend that you disconnect the tying head (see chapter "Operating problems" P17), check that the wire isn't stuck and try to insert it with the head removed.

7 Unclip the brake system lever.

At the start of each reel, check that the wire is properly rolled and doesn't stick between cheeks.

8 Switch the machine on and press briefly on the control switch to cut the excess wire.

You can now start tying operations.

Removing the reel

- **Reel with remaining wire**

Clip lever upwards to allow the wire free movement through the passage.

Pull the reel to unclip it from the machine.

- **Empty reel**

Pull directly on the reel to unclip it from the machine.

Carry out a visual check on wire exit to ensure that there is no wire remaining in the machine.

After the last tying operation it is possible that some wire may remain stuck in the tying head:

- If it does not prevent you from loading another reel, carry on working. It will come out during tying, usually without a problem.
- If it does prevent you from feeding a new wire through, disconnect the head and remove the remaining wire by hand (see chapter "Operating problems", P. 17).

USE

Making a tie

- 1 Hold the end of the branch and the trellising wire firmly in your free hand and bring the A3MV2 closer.

Position the tying head just before the last node on the branch.

- 2 Firmly place **the branch + the trellising wire** inside the tying head.

Go right up to the abutment to ensure that the arm closes fully and attaches the wire correctly.

- 3 Move the machine back firmly to release the tying head: the wire then wraps round the branch. Press control switch to complete the tie.

The knot is made more or less tight depending on how far you pull back the machine (see next chapter).

- 4 The tie holds the branch on the trellising wire.

Tightening the knot

Position 1 = tight knot.

Pull the machine back approximately 1 to 2 cm, then press the control switch.

Position 2 = loose knot.

Pull the machine back approximately 3 to 4 cm, then press the control switch.

Adjusting the number of turns

To vary the number of turns, move the wheel to the right or left

Adjustments vary from 3 to 6 turns. The number of twists increases the holding power of the tie. **The standard knot adjustment is 4 twists.**

Ask your retailer to help you choose the best compromise to suit your region, the type of wire you are using and the tying method.

twist 3 turns

twist 6 turns

RECHARGING THE BATTERY

The battery has sufficient autonomy to complete between **7000 and 8000 ties**.

If you are thinking of doing more than 8000 ties a day, we advise you to:

1. Either **recharge the battery for at least an hour** during your lunch break to achieve extra autonomy of approximately **3000 ties**.
2. Or buy the 2-battery option.

N.B. a few minutes before your battery is completely discharged, the A3MV2 may lose speed or no longer cut the wire.

Disconnect connector on the A3MV2 **3** from the battery **2**.

Connect plug on the charger to the 230 V 50 Hz supply in a well-ventilated room free of inflammable products and sources of ignition.

Connect connector on the charger **1** to connector on the battery **2**.

The charger starts to work automatically as soon as the battery is connected.

A orange indicator light glows steady during the charging time. When the battery is fully charged, the indicator light turns green and the charger supplies a holding charge.

If the indicator light on your charger does not light up, leave your battery connected and, at the same time, disconnect the plug (230 V) from your charger and re-connect it until the orange indicator lights light up.

For information, it takes about 5 hours to charge up the battery belt. **Do not leave your battery on charge for more than 15 hours.**

When the battery is charged, disconnect the charger to avoid damage caused by a possible power surge in your electricity supply.

Using a charger or battery other than those made by us is strictly prohibited as there is a risk of breakdown or accident; such use will cancel the manufacturer's guarantee.

It is essential to recharge the battery at least **every three months** during the off-season.

Safety instructions for batteries :

When on charge, the battery should be placed in a room, open to the air, out of its carrying case.

The room temperature should be between **10° C and 25° C** and should not be damp.

The battery should not be covered or close to a heat source.

Never try to open it for any reason whatsoever.

Never place it in contact with water.

Check that it is clean and dry before putting it on charge.

Environmental protection instructions :

Batteries known under the abbreviation NiCd contain Cadmium; those known under the abbreviation NiMH contain Metal hydride.

Worn or faulty batteries must be recycled in compliance with directive 91/157/EEC.

Do not throw the battery out with the household rubbish; do not throw it into flames or water.

Do not open the battery/ machine.

Drop the battery/ machine off with an INFACO approved retailer.

The A3M charger should only be used with the A3M batteries provided for the purpose.

It is formally prohibited to use the A3M charger to recharge a non-rechargeable battery. This would lead to serious damage.

SERVICING AND MAINTENANCE

Daily maintenance

Lubricate at least twice a day :

- in the morning before you start work
- at midday

Lubricate at the points shown below:

The following tasks should be carried out with the machine disconnected.

- **Lubricate to restrict wear**

Spray the end of the head on the blade side.

Spray the end of the head on the wire-pinching side.

Spray inside the head.

Spray beneath the metal ring.

- **Lubricate to make your work easier**

Spray the point of contact between the reel and the cheeks

Spray directly on to the wire on the reel, once or twice per reel, to help the wire to slide more easily as it moves round the reel.

We strongly recommend doing this when the wire becomes unpleasantly difficult to pull on during the typing operation

Annual maintenance

During the off-season, recharge your battery at least once every two months and store your machine in a dry place at a temperature of **between 10° C and 25° C maximum**.

We strongly recommend that you carry out our suggested **servicing routine** every year. This will allow you to start off the following season comfortably and in complete safety.

OPERATING PROBLEMS

These tasks should be carried out with the machine disconnected.

The loop no longer forms during the tying operation

1. A piece of wire may be stuck in the wire pincher **1** :

To release it, press pin **2** in the circular orifice with your fingernail or using the supplied pliers.

2. The wire may be bent at exit **3** : (no need to disconnect the machine)

Simply go through the cycle empty or run the knife only and resume the tying action.

3. The wire is jammed

Try first of all to take hold of the wire at the back of the machine and push it forwards.

- If the wire emerges switch the machine back on.

Press control switch to carry out a short cut, then resume tying operations.

- If the wire does not emerge, pull it right out of the machine.

To do this: unclip lever.

Remove the wire; it may be jammed because of a bend, in which case you will need to pull firmly to remove it.

Then straighten the wire so that it threads smoothly.

Thread the wire through until it emerges. Switch the machine back on and press control switch to carry out a short cut.

Unclip lever and resume tying operations.

The machine no longer operates, the tying head is stuck

Push rod **1**, which hits against ring **2** when the wire is cut, sometimes goes out of its trajectory and become stuck on the outer edge of ring.

The arm **3** often remains locked and can't open completely. **Do not try to force arm open as you may damage the mechanism.**

Bring tying head in to a central working position, following the arrow below. Then take hold of ring and move it forwards and backwards until the push rod returns to its position beneath ring.

It is normal for the tying head to resist and make you force it to bring it back into its operating position.

Ring is released when the push rod has returned to its initial position. The arm must be fully open. Check that the tying head can turn freely again.

You can then switch the machine back on and resume tying operations.

At the end of the reel, some wire is stuck in the tying head

- 1 Pivot tying head 90° to gain access to screw.

- 2 Use key (provided in the case) to loosen screw by approximately 4 or 5 turns.

To avoid the risk of losing screw, we recommend that you do not unscrew it completely.

- 3 Take hold of tying head 01 and pull it to remove it from the body of the machine. (1).

Once you have disconnected the tying head, remove the end-of-reel wire 01 from the tying head (2).

You can also take the opportunity to insert the new wire, as it will be easier to thread through.

4 Before you put the head back on, we recommend lubricating the shaft with guide pin.

5 Put the tying head back on, positioning guide pin opposite its housing. Then tighten screw to complete the operation.

Repeat the steps 1 and 2 in reverse order.

The operation is finished.

SAFETY INSTRUCTIONS

CAUTION. To reduce the risk of electric shock, injury, and fire when using power tools, observe the following basic safety precautions. Read and follow these instructions before using the tool and retain these safety instructions!

When not in use, your tool and accessories should be unplugged and stored in their respective packaging.

Your tool must be disconnected from all power sources for the following operations:

- **Maintenance.**
- **Recharging the battery (never leave your battery on a trickle charge for more than 15 hours).**
- **Maintenance.**
- **Transport.**
- **Storage.**

When the tool is in use, always remember to keep your hands away from the head of the accessory. Do not work with the tool if you are tired or not feeling well. Wear the safety equipment specifically recommended on each accessory. Do not leave the tool within the reach of children or visitors.

Do not use the machine if there is a risk of fire or explosion, e.g. the presence of inflammable liquids or gases.

Never carry the charger by the cable or pull on it to disconnect it from the socket.

Never carry the charger by its cable. Keep the cable away from heat, oil and cutting edges.

Never use the machine at night or in poor light without setting up extra lighting. When using the machine, keep both feet firmly on the ground and stay as well balanced as possible.

This machine does not cause vibrations or jerks.

Do not leave the machine on the ground and do not leave it exposed to bad weather.

If the supply cable on your charger is damaged, have it changed by the INFACO factory or an approved A3M retailer.

GUARANTEE CONDITIONS

A3M machines are guaranteed for one year against all faults and manufacturing defects. The guarantee is not valid unless the guarantee card has been duly filled in and returned to the address printed on it.

If the guarantee card has not been returned at the time of the guarantee request, the ex-works departure date will be used to determine the guarantee period.

INFACO may not be held liable for any machines sold by distributors more than a year after they have left the factory.

This guarantee covers normal usage of the machine and does not cover:

- **damage caused by poor maintenance or a lack of maintenance,**
- **damage caused by incorrect usage,**
- **damage caused by normal wear and tear,**
- **machines that have been dismantled by unauthorised repairers,**
- **outside agents (fire, flood, lightning, etc...),**
- **impacts and their consequences,**
- **machines for which the guarantee card has not been returned at the time of purchase,**
- **machines used with a battery or charger other than an A3M brand.**

In no circumstances will the guarantee give rise to compensation for the fact that the machine is immobilised while it is being repaired. Repair or replacement during the guarantee period does not give the right to an extension or renewal of the initial guarantee.

The guarantee covers factory labour costs (on the condition that the machine has always been serviced) but does not necessarily apply to retailer labour costs.

The guarantee on the machine will no longer be valid if the machine has been worked on by anyone other than an approved A3M agent.

We strongly recommend that, in the event of a breakdown, users of A3M equipment should contact the retailer who sold the machine or our after-sales department on (+33) 05 63 33 91 49.

To avoid disputes, please note the following procedure :

- **for equipment covered by the guarantee, please send it to us carriage paid and we will return it at our expense,**
- **for equipment not covered by the guarantee, but which has been serviced during the previous off-season, please send it to us carriage paid and we will return it at our expense,**
- **for equipment not covered by the guarantee, and which has not been serviced during the previous off-season, please send it to us carriage paid and we will return it at your expense, cash on delivery. We will send you an estimate if the cost of the repair is more than 80 € ex-VAT,**

SERVICING

We offer a servicing package for an inclusive fee at **the end of each season**.

You may choose to extend your guarantee over the first 2 seasons.

N.B. to take advantage of the guarantee extension over the first 2 seasons: you must opt for the servicing package from **the end of the first season** (servicing carried out between April and late July).

If the service is not carried out during the first season after you have purchased your machine, the guarantee extension will be cancelled.

TYING METHOD

Branch wound with lifting wire:

If the branch **is wound all the way to its tip**, the 0.40 tie may be used in regions that are not too windy, as long as the wires are lifted quite early.

For regions where there is a risk of strong winds, use only 0.50.

Number of ties: 1 to 2
Ø wire: 0,40 or 0,46 or 0,50

Branch wound without lifting wire:

N.B. for vines with no lifter, the tie can only be guaranteed to hold if **the branch is wound all the way to its tip** and attached with 2 ties at an interval of approximately 3 to 5 cm.

Not recommended for regions where there is a risk of strong winds, not guaranteed to hold.

Number of ties: minimum 2
Ø wire: 0,50

Branch unwound with lifting wire:

For short branches, 2 x 0.50 ties at the end of the branch. For long branches, it **is essential** to place 1 x 0.50 tie loosely at the start of the branch (to allow the branch to grow) and 1 x 0.50 tie attached tightly at the end of the branch.

Not recommended for regions where there is a risk of strong winds, not guaranteed to hold.

Number of ties: minimum 2
Ø wire: 0,50

Branch unwound without lifting wire:

Not recommended, not guaranteed to hold.

Branch bowed with or without lifting wire:

The tie on the end of the branch must be tight, as there is not a bud after the tie. If a tie is added at the beginning of the branch, this should not be tightened to allow the wood to grow properly.

Number of ties: 1 or 2
Ø wire: 0,50

Cordon Royat with lifting wire:

Attach to the ends (with no buds after the tie). Contact us for advice about young vines.

Number of ties: 2
Ø wire: 0,50

Cordon Royat without lifting wire:

Not recommended, not guaranteed to hold.
