SWEET STUFF

With the sole focus of making practicing golf more effective and efficient, Wolf created Tour Aim. With every aspect of the golf swing starting with proper alignment and aim, he quickly saw the benefits of using Tour Aim as an effective practice tool. As a result, his handicap dropped from 11 to 6 in three months. With these results and feedback from hundreds of golfers and teaching pros, Wolf brought Tour Aim to the market. Now hundreds of teaching pros and amateurs around the world are using Tour Aim to improve their games and their student's games.

Tour Aim is quite easy and straight forward to use, and fits neatly in a stand golf bag, making it perfect to take to the range for practice.

DrySee

Golf courses are unpredictable places and occasionally players suffer cuts, scrapes, insect bites and whatever else can happen outside in all types of weather and conditions.

A small emergency kit is something that all players should have in their golf bags for those unexpected occurrences that can leave one bleeding or nursing a nasty bite wound.

The latest item for those emergency kits takes bandaging up a wound to the next WWW.GOLFBVACATIONSMAG.COM

level. DrySee waterproof bandages are not only the first bandages built to keep moisture out, but measure the quality of the protection with its wetness indicator.

The liquid indicating perimeter of the bandage will turn dark blue if moisture enters the bandage from the outside—prior to reaching the wound site. Average bandages found in standard first aid kits do not fully seal off a wound, so you risk getting sweat, germs and bacteria getting into your wound.

The low exudate center pad measures moisture from the wound and will change color with saturation, letting the wearer know when it is time to change the bandage.

The pads come in their own sterile enclosures that are easy to pack in your golf bag for emergencies and come in a variety of sizes. This product also can come in handy to get you back on the links following a small procedure or cut, since they offer great waterproof protection and let you know when it is time to change the dressing—which can be used for up to four days.
