We are pioneers, since 1989, in designing and producing lifestyle accessories in ethically sourced, sustainable materials.

Eco-Bags Products, Inc.

Long-Lasting Sustainable Accessories

34 Years of Manufacturing sustainable and Eco-friendly Products

Eco-Bags Products, Inc. is the pioneer in innovating and manufacturing customized, sustainable textiles. Our in-house team is instrumental in researching, designing, and developing products made from organic to recycled cotton, and Birla cellulose.

From sourcing raw materials to producing and exporting finished products across the globe, we make a conscious effort to make a positive impact on the environment and our community.

Customers Across the Globe

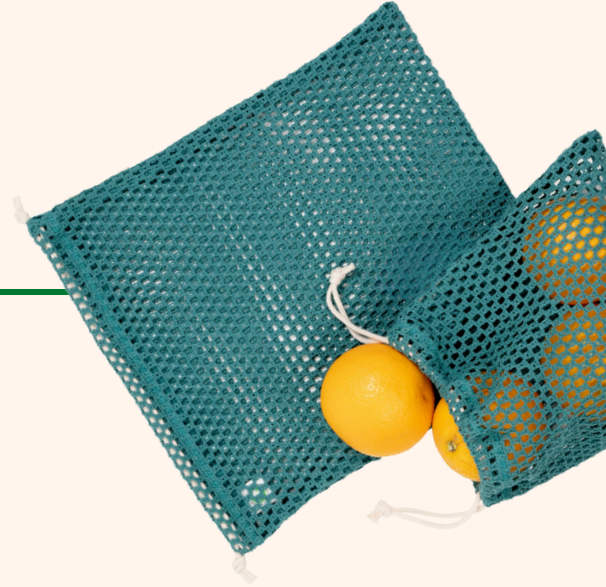

ECOBAGS®

The Materials

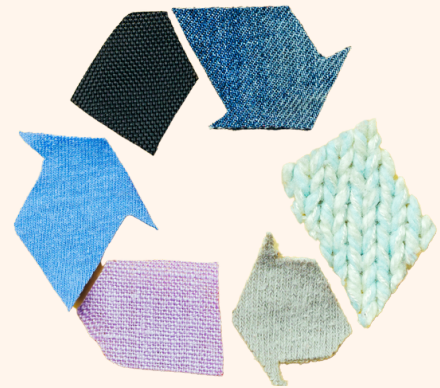

Certified Organic Cotton

Organic cotton stands out as the most environmentally-friendly choice among cotton options, as it is cultivated without the use of chemical pesticides, fertilizers, or herbicides, and it carries official certification.

Certified Recycled Cotton

This cotton comprises reclaimed post-industrial organic and natural cotton remnants, rescuing what would otherwise end up in a landfill. As a result, this canvas may exhibit a slightly darker and more textured appearance compared to its organic and natural counterparts.

EcoVero Cellulosic Fiber

Birla Cellulose is a prominent producer of man-made cellulosic fibers with a strong commitment to sustainability. Our natural-based fibers are derived from renewable wood harvested from responsibly managed forests. We employ a closed-loop process and environmentally efficient technologies, which recycle raw materials and preserve precious natural resources.

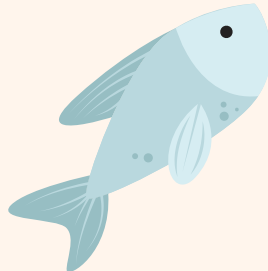

Why Choose Us

Our accessories are crafted from entirely natural materials, making them both fully recyclable and biodegradable. Natural fibers provide a sustainable alternative to single-use plastics.

5,000,000,000,000
plastic bags are produced annually.

Only 1 to 3 %
of plastic bags are recycled
worldwide.

10% of plastic
that we use ends up in
the ocean.

20-500 years
to decompose various
types of plastic.

2.9 kg
of CO₂e for every kg of
plastic burned.

“There is no such thing as
‘away’. When we throw
anything away, it must go
somewhere.”

-Annie Leonard
