

TIMCP Contactless Payment Timer - Summary Sheet

The TIMCP is our first contactless payment timer and allows payment by debit & credit card as well as Apple, Android or Samsung Pay. Users simply select the number of sessions required, (1-4), using the touch screen display and when prompted, hold their payment card or device against the contactless reader. Once payment is authorised, the time purchased will display on the clear digital display and the connected device can be used. An optional key operated override switch allows connected devices to be used without payment.

The payment system is managed by Nayax Ltd, a multinational provider of financial services. There is a monthly fee of £10.00 per month payable direct to Nayax Ltd. This covers SIM, data usage, updates, support and 24/7 access to the Nayax DCS portal for reports and machine management. There is also a fee of 3.95% per transaction and all transaction payments are paid directly into the owner's bank account by Nayax Ltd on a monthly basis, less all fees.

The TIMCP uses the mobile network to communicate and is supplied with an antenna to ensure a reliable connection. If the mobile signal is not strong enough where the timer is located, an ethernet connection can be used.

Time per payment can be set in either minutes or seconds with a range from 1 to 127 and simple dip switches inside the timer are used to set the time per session. It is an accumulative timer where each additional contactless payment will add the programmed time to any time remaining and the multiple pricing option allows up to four different pricing structures to be created for one piece of equipment, (e.g. you could have £2.00 = 3 mins; £3.50 = 6 mins; £4.00 = 9 mins and £5.00 = 12 mins).

Wiring Diagram

Specification

Part Code	TIMCP
Availability	Special Order *
Max. Current	50A
Country of	UK
Manufacture Width	145mm
Height	250mm
Depth	110mm
* Special order items are generally be available within 7-10 working days. For more information, please contact our friendly sales team.	

Popular Applications

- Washing Machines & Tumble Dryers
- Showers (electric and mixer showers with use of solenoid valve)
- Sports Lighting (e.g. Pool & Snooker Tables or Squash & Tennis Courts)
- Equestrian (Solariums, Wash Rooms etc.)
- Air Conditioning
- Sun Beds
