

Adding Wiggle Room

The shapes in my electronic cutting files fit the placement lines perfectly. They are a bit like puzzle pieces. However, if you need a little more “wiggle” room so that you are positive that the embroidery stitches will catch the edge, you can add an “offset” of about .016” which is about 1/32” of an inch. To do this, first convert your .SVG files to Studio files and then follow the directions below.

1. Open the shape in the Silhouette window and select it.

2. Select OFFSET.
3. On the right-hand side, change OFFSET Distance to .016 inches.
4. Select Apply.
5. The original shape has been offset by .016 inches.
6. You will then need to delete the inner cutting line. Be sure you select the right line before deleting!
7. You are now ready to cut.
