

Acryl it

Easy, affordable turntable upgrade product.

Upgrade your Pro-Ject Debut, Debut Carbon, or Xpression turntable to "Esprit"-standards with the Acryl it platter. Acryl it is made from acrylic with a satinized surface and **brings a more liquid sound** that's free of platter resonances.

Acryl it is **easy to use**. Just exchange your stock metal platter for Acryl it. Unlike metal platters, which require a felt mat between the record and the platter to damp metal resonance, you can **put your record directly on the acrylic surface**, with nothing in between.

Acryl it improves overall performance significantly!
