

## VC-S2 ALU and VC-E

**„This is one of the best investments you can make if you're serious about vinyl.“**

The two models of machine are now available: the VC-S2 ALU and the smaller VC-E. There's a £100 difference between the two machines at retail accounting for the improvements of the VC-S2 ALU, though the two machines are principally very similar. A record is spun at 30RPM on a rotating platform barely larger than the label, and fluid is applied with an included brush.

The fluid is then sucked away by the vacuum into either a 500ML (VC-E) or 2.5L (VC-S2 ALU) tank. Both machines include the necessary accessories to clean 12" and 10" discs, and a 7" cleaning kit is optionally available. **This is another evolution of Pro-Ject's excellent vinyl cleaner line.**

### Summary

The two new models bring more welcome improvements to what was already a top-class product. **It's lighter, better looking and quieter than before, and raises the performance bar even further. Highly recommended.**
