

Automat A1

**"It makes listening to records
a real pleasure"**

- Take the **record player out of the packaging**, put on the dust cover **and you're done**.
- Especially those who just **want to listen to records casually** will be pleased with such an **easy installation**.
- In combination with the **Ortofon OM 10 cartridge**, the ultra-light aluminum tonearm is said to **perfectly reproduce transients and microdynamics**.
- **The interface** of Pro-Ject's A1 fully automatic turntable **is a dream**. We put on a record, **pull the lever to „start“** and that's it. **The rest runs automatically**.
- The **rotation** of the turntable **is perfect**. The **platter and motor** are **perfectly matched** to each other.
- If the speakers are turned off, we **only hear the needle**, which is currently picking up the sound. **This is really remarkable**.
- We are **properly surprised** when we activate the **internal amplifier** of the Pro-Ject A1 record player. The **sound is finer and even more detailed** than before. The mids as well as trebles stand out softly and yet **true to life**. **The bass is powerful and full**.
