"The Pro-Ject A1 gets so much right"

- There's **plenty to like** about the Automat A1, **especially** where **sound** is concerned.
- Like every other Pro-Ject turntable, the A1 is **properly built and finished**.
- Really, all that's required is to connect the A1's hard-wired phono cables (and grounding cable) to your speaker system and **you're in business**.
- **Even, balanced** and **information-rich sound** – **Expressive and articulate**.
- **The Pro-Ject automatic mechanism is entirely disengaged once the cartridge engages with the vinyl, so you can be certain the sound the A1 is making is uncorrupted by any internal influence.**
- The **low-end is substantial and punchy**, but **controlled** enough to keep up the **momentum** of a recording.
- There's more than **enough space for the singer to stretch out and express himself**.
- The Pro-Ject is good at **revealing details** regarding **tone and timbre**.
