

BUYERS GUIDE

Mobility Scooters come in all sizes and features

MOBILITY SCOOTER BUYERS GUIDE

Buying a mobility scooter is an exciting process. With various makes and models on the market, each with a different set of features. Add the multiple accessories on offer; it's no surprise you may be confused. Today's blog outlines the differences between each type of scooter and the features they include, hopefully helping you make a final decision.

TRAVEL SCOOTERS

They are designed to be lightweight and compact. Ideal for trips to the shops and days out with family and friends and small enough to be taken on holiday, travel scooters are incredibly portable. Fitted with an intelligent built-in mechanism, you can break travel scooters into individual sections; their narrow frames and shorter lengths make travel scooters easy to maneuver.

Usually include a battery ranging from 10 – 15 Ah in power, giving you an estimated distance between 12 – 24km.

URBAN SCOOTERS

Urban scooters are ideal for riders looking to get out and about in their town or city. Designed to be comfortable enough for longer journeys yet easy enough to maneuver shops and malls, pavement scooters typically include four wheels with either solid or pneumatic tires, a larger padded swivel seat, and a tiller bar. This type of scooter is better suited to users looking to get out and about regularly or those requiring a more comprehensive distance range. Fitted with bigger batteries, 22ah and up, and can range up to 35km.

Urban Scooters are perfect for those that like to get out and about

ALL-TERRAIN SCOOTERS

All-terrain mobility scooters are perfect for the rider that wants to do a little more than just drive on the pavement. Great for taking to the park, golf, walking trails, or the grandkids to the playground. Our All Terrain scooters are fitted with ultra-comfortable padded swivel captain's seats, with flip-up armrests. They feature suspension systems to protect you from bumpy roads and have hard-wearing pneumatic tyres. They offer the longest travel range - some of our scooters can travel 50 km on a single charge!

Perfect for the rider that wants to do a little more than just drive on the pavement.
