It should be noted; when it comes to performance enhancement, Testosterone Cypionate for women is not recommended. This is a steroid that carries far too much androgenic activity; after all, it is the primary male androgen. Women can suffer from low testosterone and there can be therapeutic benefits from the use of Testosterone Cypionate; however such treatment plans will be tremendously low dosed and should be watched closely for virilization symptoms.

### The Side Effects of Testosterone Cypionate

As an extremely well-tolerated hormone for most men, the side effects of Testosterone Cypionate are in many ways easy to control. When it comes to such adverse reactions, keep in mind they largely fall into the realm of possible and are by no means guaranteed. Even so, total dosing, genetic predispositions and your overall state of health will play a role.

As for the side effects themselves, Testosterone Cypionate like all testosterone compounds carries a high level of aromatase activity; aromatization referring to the conversion of testosterone into estrogen. As estrogen levels rise, this can lead to gynecomastia (male breast enlargement) and excess water retention. This excess water retention can even negatively affect blood pressure. In-order to combat such effects, especially gynecomastia, many turn to Selective Estrogen Receptor Modulators (SERMs) such as Tamoxifen Citrate (Nolvadex) and for more serious protection Aromatase Inhibitors (AIs) such as Anastrozole (Arimidex). Without question, AIs are the most effective; however, they can also prove to be problematic when it comes to cholesterol and caution is advised.

Beyond these effects, Testosterone Cypionate can promote dihydrotestosterone (DHT) related side effects such as acne, hair loss and prostate enlargement; however, it should go without saying DHT steroids will be the prime culprits. In-order to provide protection, a 5-alpha reductase inhibitor such as Finasteride can be useful as it is an androgen suppressor and the androgen DHT is causing the problem. It must be noted; hair loss is only possible in men predisposed to male pattern baldness.
