ensuring cleaning visions

# ENSURING CLEANING ENVISIONS

Our founder and CEO Anjanaa Vij started the journey of Kibble in 2004 with a commitment to deliver any time & every time in the world of cleaning and hygiene. Setting up base from the hotel industry, we moved forward to transform cleaning in a wide array of sectors including but not limited to hospitals, restaurant chains, large convention centres & malls. With massive growth in numbers as well as positive testimonials in a short span of time, we took the plunge to become a Made-in-India brand gone global. We now have a solid distribution network with supplies reaching pan India and overseas as well.

Almost two decades in, we have been constantly adding new products to cater to the ever changing needs of the cleaning market, in India as well as overseas. We have a wide range of distinctly designed manual cleaning equipment, which is smart and affordable. We have consistently focused on diversifying our portfolio, to include sectors like hotels, hospitals, corporate offices, facility management companies, housekeeping providers in the private as well as public sector, and many others.

All of this has been made possible because of our focus on two primary spheres - product design and customer service.

*ABOUT OUR

## INTERVIEW ON EUROPEAN MARKET

### INDUSTRY TALK

## Kibble Enterprises Looking at European Markets

Kibble has come a long way since its inception. What is the story behind the success?

Manufacturing Kibble was established as a small trading unit in 2004 with minimum resources, limited client base and a dream to serve the world with quality-conscious solutions leading to hygiene. The trust and stake invested by the early adopters in our value system gave us a sense of accountability towards them. It helped us further in our dedication for serving them and inching closer to our vision together. The commitment towards providing superior quality, timely delivery, focused customer care and the finest after-sales support has helped us retain early clients and also expand client base.

In the last few years, since you have joined the family business, how do you perceive to enhance the demand for Kibble products?

It is the trust of our clients that has helped us reach where we are today. Apart from everything else, we have had to ensure that the trust is maintained. For us, customer satisfaction is of prime importance. As a result of our sales, and it has worked perfectly for us, not only do we see a surge in demand, but we also see our neighbouring countries as a pilot to study the response. We have our base in Nepal and Sri Lanka, after

launching in two countries, we further expanded to the Gulf with UAE, Qatar and Bahrain. Having experienced two diverse markets, we are now looking at creating our foothold in Europe. We also plan to cover more countries in these regions and take our brand to other regions as well.

Since India, a highly competitive market, with very low entry adoptions, innovation is one of our secondary agendas. The primary being generating market through expansion plans. But we make sure to bring more ergonomics by introducing innovations in our existing products. For instance, we have a design-oriented rubber grip underneath the handle which makes it more user-friendly.

What are the innovations made over the years?

We believe that European standards are the finest and strongest in the world, making their buyers more conscious towards quality and value, something that we have a history of providing right. We find this as an opportunity for us since we believe in providing the highest quality with a promise of timely delivery and unmatched customer support.

What are you participating for the first time at InterClean Amsterdam. How do you look at the European market?

We started our overseas expansion by exploring the neighbouring countries as a pilot to study the response. We have our base in Nepal and Sri Lanka, after

### SPECIAL REPORT

## GETTING THE RIGHT COLOURS

It is not every day that the people behind the scenes who ensure that hotels, facilities and linen are spick-and-span are lauded on such a large scale as the Excellence Awards! Since the past four years, the Excellence Awards has been a continuous effort towards bringing together these 'veterans' of the cleaning industry.

At the time when property management services in Mumbai was just beginning to catch up, Simi Thakur made an entry into the housekeeping business. Having worked with the hospitality industry since 1989 with five star properties like Hyatt Regency Deira, Clarks Group of Hotels, Majora Beach Resort and Holiday Inn in Mumbai, "I had gained good enough confidence, exposure and experience to do something of my own and I saw huge scope in the cleaning business, outside the hotel industry."

Having experienced the hardship of acquiring licenses and meeting statutory compliances, which were much tougher then, Simi went about engaging professionals right from the beginning in forming NeatSpace. "Being from a working class family, no bank balance, nothing in hand to start a business except for what was saved from the salary... At one point of time, I was not sure if I had made the right choice shifting from five star comfort zone to uncertainties of doing a housekeeping business."

The next day was melting away meeting everyday needs, assuaging her from all sides and uncertainties chipping down her will. However, hard work and professional approach gave Simi a big break with a huge contract and since then has been no looking back.

Simi's approach lies in the appropriate application of technology to achieve the best in housekeeping. Today, NeatSpace is where she aimed it to be – in the top league. Her client list grew; NeatSpace expanded to three locations – Mumbai, Pune and Delhi. With business professionals travelling across the world, she understands that the hygiene expectations have also increased. Fittingly so, Simi wants NeatSpace to be on par with internationally acclaimed FM service companies and is ready to run the extra mile to achieve that.

68 Clean India Journal April 2017 www.cleanindiajournal.com

they have ever. But even when I was working round the clock putting the company together, I made sure I spent quality time with them – took them on three long holidays when I was phone free and away from work hassles. I sincerely attribute those moments to my team," she reminisces emotionally.

Passion, hard work and positive approach were Arjuna Vij's only assets when she set foot in the cleaning industry with a dream of creating a brand. With minimum knowledge to begin with, she learnt on the job and today, a decade later, she had accomplished her goal. Kibble Enterprises, her company that markets smart manual cleaning tools, is among the most recognized companies in the industry. During this journey, Kibble imported products from USA, Denmark, Italy and other countries.

"Then I thought, why not make these products in India. Along with Gyan Medications (GM) – the indigenous manufacturing facility in India, in 2007, Kibble introduced the regular consumables (of Indian make) with international quality. "Though new, the acceptance was great and together we developed a premium range of products made up of impact resistant polypropylene plastic in various sizes."

"Later, in the same year, we introduced Microfibres in India, not just for floor cleaning but also for hand,

Initially, when we began we were more focused on marketing smart manual cleaning tools and tied up with many international companies. Then I thought, why not make these products in India. We launched our own products in the market and even though it was new, the acceptance was great and we gave the market a premium range of products.

Arjuna Vij >>

## INTERVIEW ON WOMEN ENTREPRENEURSHIP

## INTER-CLEAN EUROPE 2018

### FOCUS

countries, especially Europe, China and Turkey, had in the same markets. These markets are price sensitive and quality conscious. What really sells is quality products at competitive prices. "It is in this arena that we find a demand for 'Made in India' products," says Navneet Chaudhri, KC Green Revolution, which has participated at the InterClean Show for the second time.

"It is as if the European and Far East and Asian markets have been waiting for India-made products to enter the market and we are able to match and surpass the expectations of users in terms of quality and price too."

KC Green, specialises in producing waste receptacles, hygiene bins, dispensers and recently at the InterClean show, it launched its new range of mopping buckets. "Product wise, we have received very good enquiries at this show and buyers are appreciating our products."

**Buying Patterns**  
The Indian Cleaning segment, largely a supplier market, has a handful of companies that are engaged in manufacturing products not only for local consumption but also for the international suppliers. Today, there are international manufacturers and suppliers importing/procuring Made in India products for the global consumers. However, the consumption and buying patterns largely differ in the European markets.

"We are experiencing the difference in consumer preferences at the InterClean show. In an Indian show, every other visitor would walk into the booth to know and understand the products on display and decide on their purchase. It is a more familiar atmosphere. However, at the European level, buyers come to the show with specific demands and look only for those products. Not everyone walks into the booth."

**Learning Process**  
Having understood the pulse of the Indian market, exhibiting at an international expo like InterClean opens up an entirely new world. "Here we come to understand the preferences of customers in Europe, Middle-East, other Asian countries, Africa and others. It is altogether a new learning experience. We get to know the product specifications required

Kibble Enterprises: Umesh Vij, Mohit & Arjuna Vij

in these countries, the shape, the size, even the price factor – the required customisation to suit the requirements.

"Whenever we come the next time we know exactly what we need to showcase; including products that are in popular demand."

Quality matters are given priority. "For better outcomes, even if it means one has to pay a little extra, the consumers in the European market are willing to pay."

**Growth Potential**  
KC Green participated for the first time at InterClean in 2016 when it mainly manufactured dust bins. "But now we have showcased medical sharp containers, new waste bins and feminine hygiene bins, newly launched single-double-triple bucket trolleys and also aerial screens."

The focus of KC Green has changed. "We were only into producing products for waste management and were making bins but now we have diversified into the cleaning industry and are making more and more cleaning related products. Next time, we will also bring dispensing units, hand dryers... so that when the consumer visits our booth we have all the solutions like some of the other companies here in Europe."

"Exposure to international trends enables us to improve the quality of the products. This we realised when we participated at the Dubai show. We have come far ahead and are able to make the finest quality products," concludes Navneet Chaudhri.

## ARTICLE ON SIGNAGE

### PRODUCTS & SYSTEMS

### Recycled Signage Boards

Delphi, a subsidiary of Kibble Enterprises, specialises in sustainable development of products by converting waste into resources by recycling and reusing them.

Delphi with proper implementation of vast knowledge of SOM (Strength of Material) reclaimed wrapped and recycled Signage boards in black colour without compromising with the quality of the material. The product is environmentally acceptable and economically feasible. Thus,

recycling today, for a better tomorrow.

**Applications**  
Can be used to warn visitors or employees to avoid mishap or unnecessary injury in case the floor is wet during cleaning or other maintenance work.

**Features**  
Delphi Signages are two-faced for visibility of the warning on both sides and come with two signs – Caution Wet Floor & Cleaning in Progress.

70 Clean India Journal July 2017 | www.cleanindiajournal.com

### HYGIENE SOLUTIONS

### Mohit Vij, Director-Sales & Marketing, Kibble Enterprises

Microfiber is a fine synthetic fibre that is made from a combination of polyester and polyamide (nylon). It's hundred times thinner than human hair. It is made of eighty percent polyester which has water absorbing capacity up to four times its weight. It has twenty percent polyamide which gives a static charge to the material and helps it to attract dirt from surfaces.

The microfiber technology is used mostly in the cleaning industry to make dry floor mops, cloths, surface & wall dusters, scrub pads. The silicon wool in the scrub pads helps in lighter brushing of sinks and taps.

We train people on how to use the product for maximum results. The products can be used either dry, damp or wet. They can be used just like regular dusters. On an average, the microfiber cloth can stand 400-500 washes. Bleach is the most menacing enemy to microfibers.

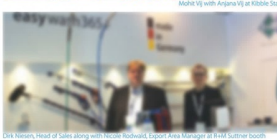

Almost every brand has microfiber products now. About 20 well-known brands are available in India. The fin-fine varieties are used in car cleaning. The increasing awareness will only guide users to buy the best product and use them smartly and appropriately.

## INTERVIEW ON MICROFIBER TECHNOLOGY

## MECTW DUBAI 2016

### FOCUS MECTW

76 Clean India Journal December 2016 | www.cleanindiajournal.com

the first in the world to introduce the product and it was done in Dubai as the climate in Middle East is such that cars need the protection. People inside the car will be cool and you will feel very comfortable drive in the car.

**Awards**  
City Cleaning Awards  
Middle East Cleaning Technology Week had launched in 2015 a first-of-its-kind initiative in the region – the City Cleaning Awards to recognise the dedicated services provided by the outdoor cleaning staff in the Emirates of Dubai and Sharjah.

**Excellence Awards**  
It is not every day that the people behind the scenes who ensure that hotels, facilities and linen are spick-and-span are lauded on such a large scale as the Excellence Awards! Since the past four years, the Excellence Awards has been a continuous effort towards bringing together these 'veterans' of the cleaning industry.

The categories included Soft FM Attendant, Soft FM Team Leader, Laundry Attendants, Laundry Team Leader, Housekeeping Room Supervisor, Housekeeping Public Area Team Leader, Housekeeping Room Attendants and Housekeeping Public Area Attendants.

## ARTICLE ON SQUASHER

### PRODUCTS & SYSTEMS

#### Equipment / Tools

### Squeezer-Washer Combined Tool

Delphi-based Kibble Enterprises has come up with Squasher (squeezer + washer) a combined tool for liquid cleaning.

- Squasher is made with impact resistant polypropylene material
- The squeezer channel is made of rust free stainless steel
- Both the washer cloth and squeezer rubber is replaceable
- Equipped with adjustable telescopic pole to reach heights
- Washer channel is supported with water absorbing grooves
- Fine height adjustment between squeezer and washer channel is allowed
- Lateral adjustment of squeezer channel without any mechanical unbolting is possible
