ENSURING CLEANING ENVISIONS

Our founder and CEO Anjanaa Vij started the journey of Kibble in 2004 with a commitment to deliver any time & every time in the world of cleaning and hygiene. Setting up base from the hotel industry, we moved forward to transform cleaning in a wide array of sectors including but not limited to hospitals, restaurant chains, large convention centres & malls. With massive growth in numbers as well as positive testimonials in a short span of time, we took the plunge to become a Made-in-India brand gone global. We now have a solid distribution network with supplies reaching pan India and overseas as well.

Almost two decades in, we have been constantly adding new products to cater to the ever changing needs of the cleaning market, in India as well as overseas. We have a wide range of distinctly designed manual cleaning equipment, which is smart and affordable. We have consistently focused on diversifying our portfolio, to include sectors like hotels, hospitals, corporate offices, facility management companies, housekeeping providers in the private as well as public sector, and many others.

All of this has been made possible because of our focus on two primary spheres - product design and customer service.

*ABOUT OUR
COMPANY*

OUR BRANDS

With our smart, unique & affordable cleaning solutions, we have been adding constant & irreplaceable value to the market for almost two decades, tending to build a strong Kibble family in the market every year, not only in India but also in different parts of the globe.

With our sincere intentions, efforts & directions to serve the market with best of quality, we are able to make a benchmark our brand in the market which is also reflected through our prestigious client list.

With the vision to cater a large part of Indian market we have divided our products into two major segments – Premium range and Economy range.

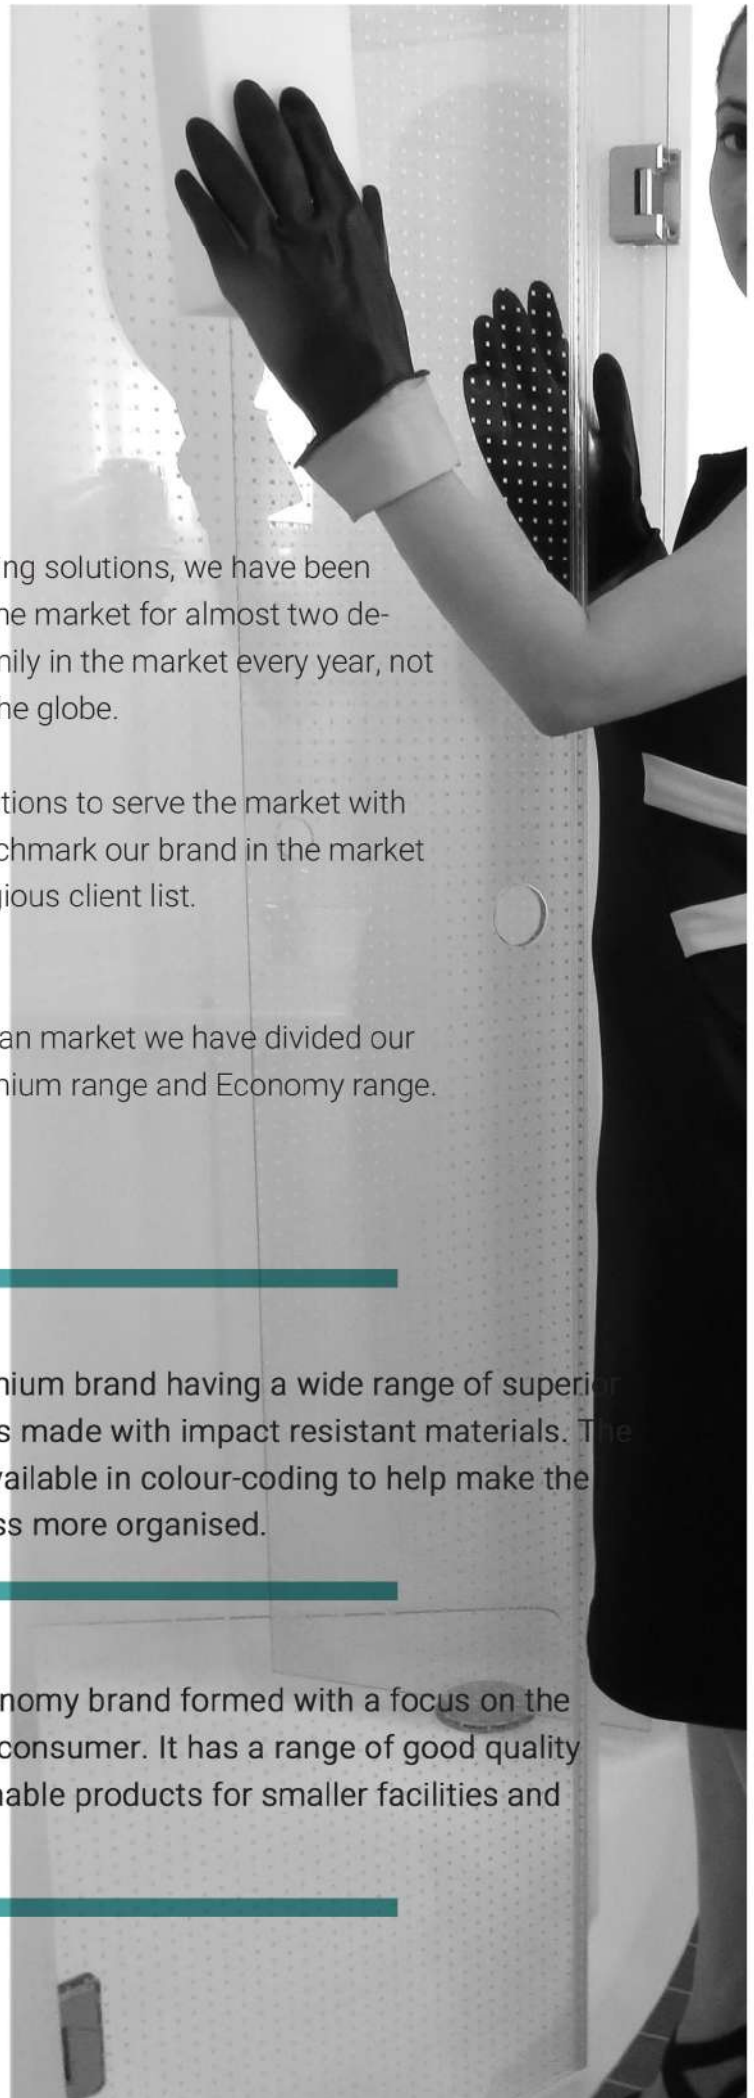

KIBBLE

Kibble is a premium brand having a wide range of superior quality products made with impact resistant materials. The products are available in colour-coding to help make the cleaning process more organised.

DELPH

Delph is an economy brand formed with a focus on the price-sensitive consumer. It has a range of good quality regular consumable products for smaller facilities and homes.

ABOUT OUR VALUES

We excel at helping clients with the right selection of tools to match their needs. Apart from providing consultants services at client's location, we also provide extensive on-site training and adequate after-sales support.

OUR MISSION

We aim to sustainably & organically reach every corner of India, simultaneously growing our distribution abroad. We also aim at vertical growth by becoming the largest and most profitable janitorial manufacturer in India. Last but not the least, become one of India's most-loved brands with excellent customer service.

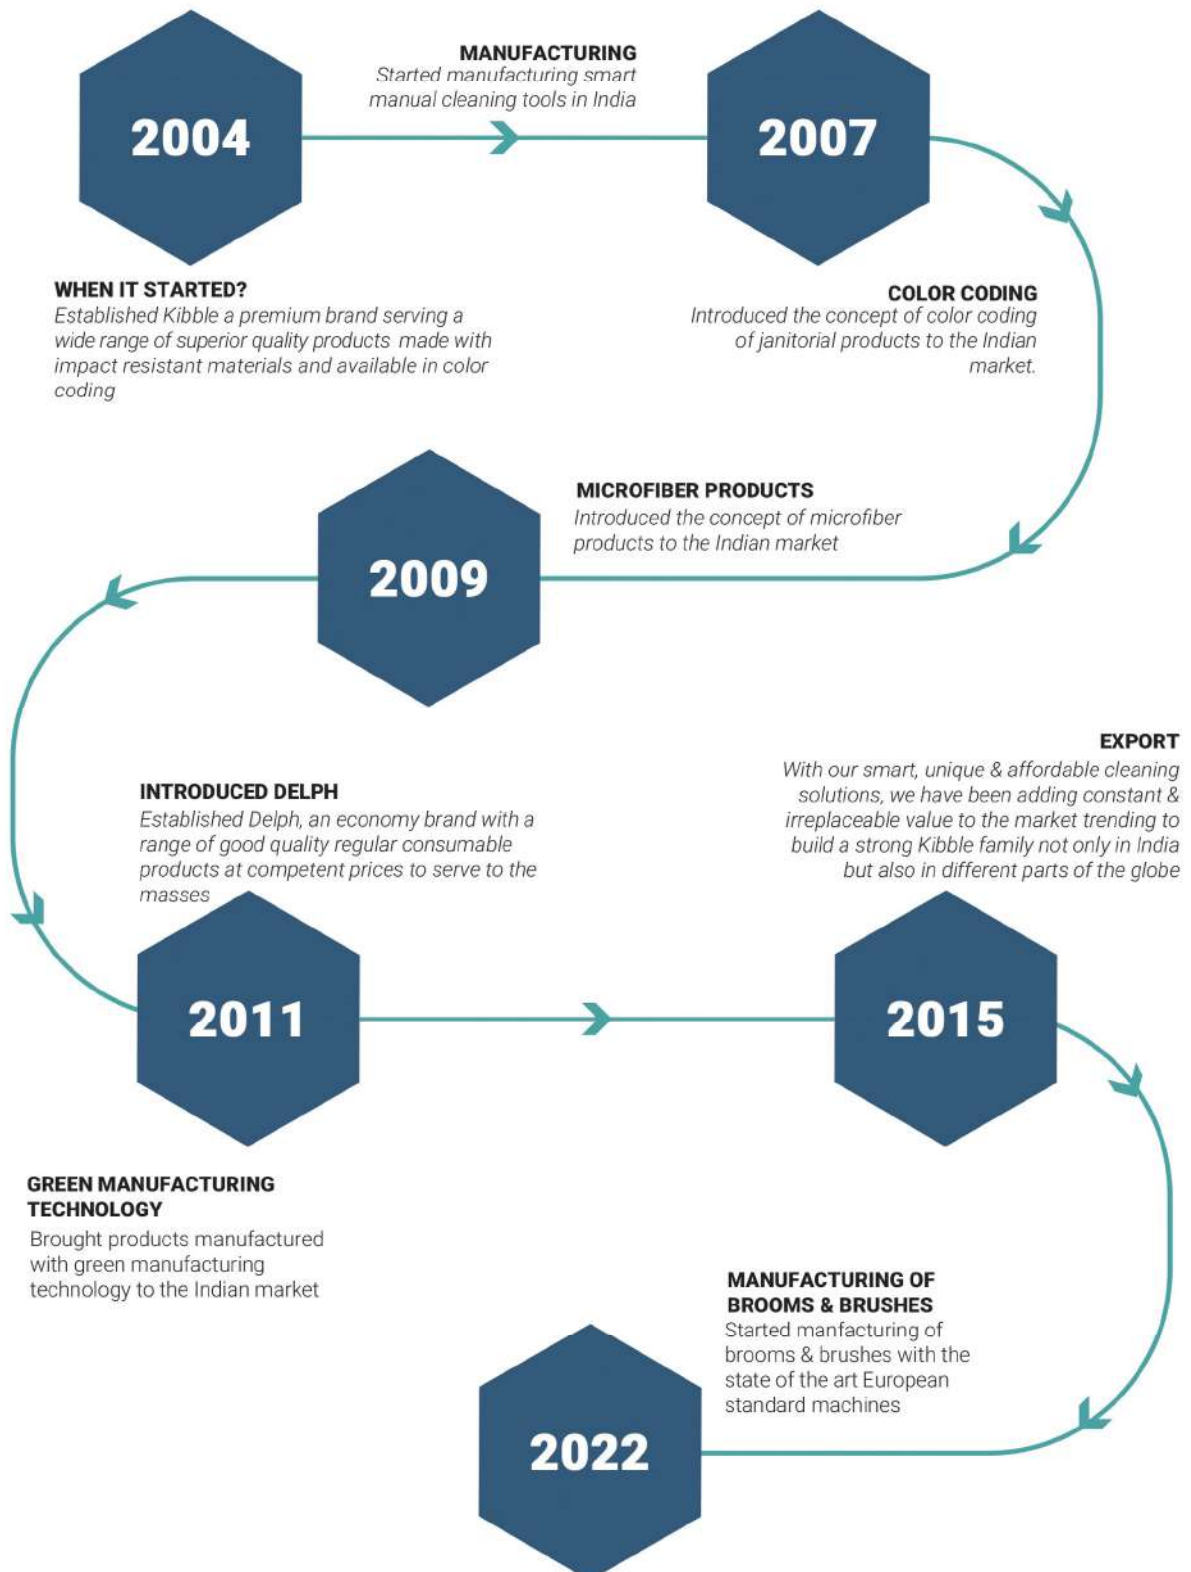

OUR VISION

People in India are often fascinated by the standards of cleanliness in first world countries. We aim to bridge the gap by educating the market on the significance of cleanliness, & help people implement smart cleaning practices easily, by making them adept in cleaning technique selection. We also thrive to introduce people to touch-free practices and other technologies that help in significantly reducing health hazards on the cleaning personnel.

OUR JOURNEY

It all started with a small enterprise - mostly lessons learnt along the journey. The first thing that we learnt about entrepreneurship was that it is actually the first step that is the hardest; taking that leap of faith. To quit whatever else that we were doing, and to dive into this world of uncertainty. But our commitment to customers, starting from the pre sale introduction and pitch to post-sale services, transpired into a massive and prestigious client list.

OUR CONCEPTS

COLOR CODING

A visual coding system which reduces language & literacy barrier when training different kind of people of the same institution in proper cleaning processes. It helps the operator in quick selection of the appropriate equipment to clean different areas. It is very important while cleaning as it helps in preventing cross contamination, improves employee's performance, increases safety of the property, reduces chemical use & misuse, etc.

Suitable for
Sanitary Fittings
& Washrooms Floors

Suitable for Rooms,
Receptions, Lobby,
Corridors

Suitable for Food & Bar
Areas, Kitchens,
Restaurants, Cafes

Suitable for Wash
Basins & Washroom
Surfaces, Tubs, Sinks

MICROFIBERS

Microfiber is a new age cleaning. Microfiber is a very fine synthetic fibre composed of 2 polymers, polyester and polyamide (nylon) which combine in a single thread; composition being 80% / 20%

GREEN MANUFACTURING TECHNOLOGY

This is a unique technology in producing microfiber yarn to skip dyeing process, thus minimizing pollution to environment. Most of our microfibers are produced under Green Manufacturing Technology.

OUR GLOBAL PRESENCE

INTERVIEW ON EUROPEAN MARKET

INDUSTRY TALK

Kibble Enterprises Looking at European Markets

Kibble has come a long way since its inception. What is the story behind the success?

Manufacturing, Kibble was established as a small trading unit in 2004 with resources, limited client base and a dream to serve the world with quality-conscious solutions leading to hygiene. The trust and confidence received by the early clients in our sales system gave us a sense of accountability towards them. It helped us further in our dedication for serving them and taking them closer to our vision together. The commitment towards providing superior quality, timely delivery, dedicated customer care and honest after-sales support has helped us retain early clients and also expand client base.

In the last few years, how has the demand for Kibble products changed?

It is the trend of our clients that has led us to such success as we see today. Apart from everything else, we strive hard to ensure that the trust is maintained. For our customer satisfaction is of prime importance, but before that, our sales. And it has worked perfectly for us, not only do we see a surge in demand after we make our clients aware of the benefits, but it also helps develop long lasting and meaningful relationships with them.

24 Clean India Journal | www.cleanindiajournal.com

How different is Kibble products to other products in the market?

When you look around in the market, you will find everything usually the same. But as you step outside, but the awareness of the food depends on the items you choose. Our USP is superior quality. We use superior quality materials, directly reducing durability. Also, the methods used in the tools are consistent, making them safe to use with advanced life.

What are the innovations made over the years?

Since India, a highly competitive market, with very less entry barriers, innovation is one of our secondary agendas. The primary being getting market share through aggressive plans. We make sure to bring more agencies by introducing innovative designs in our existing products. For instance, we have a design patent rubber grip on the handle of our products, which makes it more user-friendly.

Internationally, which are the countries where Kibble has been established and what are your plans for the future?

We started our overseas expansion by exploring the neighbouring countries as a pilot to study the response. We have now entered into Nepal and Sri Lanka. After

Mohit Vij, Director Marketing & Sales, Kibble Enterprises, speaks at Clean India Journal about its journey, future plans and business in the international market.

launching in two countries, we further expanded to the GCC, with UAE, Qatar and Bahrain. Having experienced two diverse markets, we are now looking at creating our foothold in Europe. We also plan to cover more countries in these regions and take our brand to other regions as well.

You are participating for the first time at Inter-Clean Americas. How do you look at the European market?

We believe that European standards are the finest and stringent in the world, making their buyers more conscious towards quality and value, something that we have a history of providing right. We find this an opportunity for us since we believe in providing the highest quality with a promise of timely delivery and unmatched customer support.

CLEAN INDIA PULIRE MUMBAI 2018

SPECIAL REPORT

GETTING THE RIGHT COLOURS CODED

It's the time when property management services in Mumbai were just beginning to catch up. There were no entry into the housekeeping business. Having worked with the hospitality industry since 1997 with five star properties like Hyatt Regency Deira, Clark Group of Hotels, Majara Beach Resort and Holiday Inn in Mumbai, I had gained great enough confidence, exposure and experience to do something of my own and I saw huge scope in the cleaning business, outside the hotel industry.

Having experienced the hardships of acquiring licenses and meeting statutory compliances, which were much tougher then, I started with my own company right from the beginning in forming NoSpace. "Being from a working class family, no bank balance, nothing in hand to start a business except for what was saved from the salary... At one point of time, I was not sure if I had made the right choice shifting from five star customer care to uncertainties of being a housekeeping business."

The next step was nothing away meeting everyday needs, something that I had to do and automation chipping down her bill. However, hard work and professional approach gave Simi a big break with a huge contract and since then there has been no looking back.

Simi's approach lies in the appropriate application of technology to achieve the best in housekeeping. Today, NoSpace is where she aimed to be - as the top leader. Her client list grew. NoSpace expanded to three locations - Mumbai, Pune and Delhi. With business professionals travelling across the world, she understands that the hygiene expectations have also increased. Fittingly so, Simi wants NoSpace to be used on par with internationally acclaimed FM service companies and is ready to see the same scale to achieve that.

INTERVIEW ON WOMEN ENTREPRENEURSHIP

they have ever. But even when I was working round the clock, putting the company together, I made sure I spent quality time with them - took them on these long holidays when I was photos fit and away from work hassles. I consciously attribute those moments to my team," she reminisces emotionally.

Pastor, hard work and positive approach were Simi's only motto when she set out in the cleaning industry with a dream of creating a brand. With extensive knowledge to begin with, she learnt on the job and today, a decade later, she had accomplished her goal. Kibble Enterprises, her company that markets smart cleaning tools, is among the most recognized companies in the industry. During this journey, Kibble imported products from USA, Denmark, Italy and other countries.

"That's thought, why not make those products in India. Along with Green Multimedia (GM) - the indigenous manufacturing facility in India, in 2007, Kibble introduced the regular consumables (of Indian make) with international quality." Though true, the acceptance was great and together we developed a premium range of products made up of impact resistant polypropylene plastic in various sizes.

"Later, in the same year, we introduced Microfibres in India, not just for their cleaning but also for hand, initially, when we began we were more focused on marketing smart manual cleaning tools and tied up with many international companies. Then I thought, why not make these products in India. We launched our own products in the market and eventually it was, the acceptance was great and we gave the market a premium range of products."

Arvind Vij

INTER-CLEAN EUROPE 2018

FOCUS

countries, especially Europe, China and Turkey, but in the same markets. These markets are prior sensitive and quality conscious. What really sells is quality products at competitive prices. "It is in this arena that we find a demand for 'Made in India' products," says Navene Chaudhri, KCC Green Revolution, which has participated at the InterClean Show for the second time.

"It is at the European and Far East and Asian markets have been waiting for India-made products to enter the market and we are able to match and surpass the expectations of users in terms of quality and prices too."

KC Green, specialises in producing waste receptacles, hygiene bins, dispensers and recently at the InterClean show, it launched its new range of mopping buckets. "Product wise, we have received very good responses at this show and buyers are appreciating our products."

Buying Patterns
The Indian Cleaning segment, largely a supplier market, has a handful of companies that are engaged in manufacturing products not only for local consumption but also for the international suppliers. Today, there are international manufacturers and suppliers importing/processing Made in India products for the global consumers. However, the consumption and buying patterns largely differ in the European markets.

"We are experiencing the difference in consumer preferences at the InterClean show. In an Indian show, every other visitor would walk into the booth to know and understand the products on display and decide on their purchase. It is a more familiar atmosphere. However, at the European level, buyers come to the show with specific demands and look only for those products. Not everyone walks into the booth."

Learning Process
Having understood the pulse of the Indian market, exhibiting at an international expo like InterClean opens up an entirely new world. "Here we come to understand the preferences of customers in Europe, Middle East, other Asian countries, Africa and others. It is altogether a new learning experience. We get to know the product specifications required

Kibble Enterprises (Urvi Shah Vij, Mohit & Aruna Vij) in these countries, the shape, the size, even the price factor... the repeated customisation to suit the requirements.

"Whenever we come the next time we know exactly what we need to showcase, including products that are in popular demand."

Growth Potential
KC Green participated for the first time at InterClean in 2016 when it made its debut in the dust bins. "But now we have showcased medical sharp containers, new waste bins and feminine hygiene bins, newly launched single-Drop-in-single-bag policy and also other accessories."

The focus of KC Green has changed. "We were only into producing products for waste management and were making bins but now we have diversified into the cleaning industry and are making more and more cleaning related products. Next time, we will also bring dispensing units, hand dryers... so that when the customer visits our booth we have all the solutions like some of the other companies here in Europe."

"Exposure to international trends enables us to improve the quality of the products. This we realised when we participated at the Dubai show. We have come far ahead and are able to make the finest quality products," concludes Navene Chaudhri.

www.cleanindiajournal.com | Clean India Journal | June 2018

MECTW DUBAI 2016

FOCUS

The first in the world to introduce the product and it was done in Dubai as the climate in Middle East is such that users need the protection. People inside the car will be cool and you will feel very comfortable drive in the car.

Awards
City Cleaning Awards
Middle East Cleaning Technology Week had launched in 2015 a first-of-its-kind initiative in the region - the City Cleaning Awards to recognise the dedicated services provided by the outdoor cleaning and in the Emirates of Dubai and Sharjah.

Excellence Awards
It is not every day that the people behind the scenes who develop that look, facilities and lines are appreciated on such a large scale as the Excellence Awards. Since the past few years, the Excellence Awards has been a continuous effort towards bringing together these 'unsung heroes' of the cleaning industry.

The categories included Soft FM Attendant, Soft FM Team Leader, Laundry Attendants, Laundry Team Leader, Housekeeping Room Supervisor, Housekeeping Public Area Team Leader, Housekeeping Room Attendants and Housekeeping Public Area Attendants.

HYGIENE SOLUTIONS

Mohit Vij Director - Sales & Marketing, Kibble Enterprises

Microfiber is a fine synthetic fibre that is made from a combination of polyester and polyamide (nylon). It's hundred times thinner than human hair. It is made of eighty percent polyester which has water absorbing capacity up to four times its weight. It has twenty percent of polyamide which gives a static charge to the material and helps it to attract dust on surfaces.

The microfiber technology is used mostly in the cleaning industry to make dry floor mops, cloths, surface & wall dusters, scrub pads. The silicon wool in the scrub pads helps in lighter brushing of sinks and taps. We want people on how to use the product for maximum results.

The products can be used either dry, damp or wet. They can be used just like regular dusters. On an average, the microfiber cloth can stand 400-500 washes. It's the most amazing remedy to microfibers.

Almost every brand has microfiber products now. About 20 well-known brands are available in India. The first-order users are used in car cleaning. The increasing awareness will only guide users to buy the best product and use them smartly and appropriately.

MICROFIBERS

MICROFIBERS

HOW DOES IT WORK

The split fibers give the microfiber fabric its exceptional water retention and dirt grabbing abilities. Microfiber can absorb up to 7 times its weight in water, the wedge-shaped cross sections require no cleaning fluids will trap and remove dust, particles thoroughly from surfaces with no streaks or marks left, like a magnet attraction. It can also remove stubborn dirt and grime effectively, that will greatly help to eliminate or reduce allergens may occur, therefore, it's much more efficient compared with cotton towel or other none chemical fluids used materials available in doing cleaning job.

GREEN MANUFACTURING TECHNOLOGY

A unique technology in producing microfiber yarns to skip dyeing process, thus minimizing pollution to the environment

c.n.	PRODUCT NAME	SIZE	MATERIAL
KMSP	Kibble Microfiber Scrub	09 cm x 13 cm	Microfiber

LAUNDRY INSTRUCTIONS

- # Add a small amount of liquid detergent to the laundry which contains no bleach or other additives
- # Do not use fabric softener as this clogs the cloth
- # Separate cloths from other laundry items
- # Launder with cold or mild water, Tumble dry only
- # Pre-soak in a 50/50 white vinegar water solution if concerned about bacteria

c.n.	PRODUCT NAME	SIZE	MATERIAL
KMMHM38-GL	Kibble Microbb Glass 38	35 cm x 35 cm	Microfiber
KMMHM40-GL	Kibble Microbb Glass 40	40 cm x 40 cm	Microfiber

MICROFIBERS

DEFINITION & COMPOSITION

Microfiber is a new age cleaning technology of a very thin fiber composed of two polymers - polyester & polyamide composition being 80% PES & 20% PA being 10 times finer than a human hair. Polyester has an electrostatic effect that captures & retains dust whereas polyamide has an absorption capacity that when combined with water or cleaning solution, facilitates and allows the removal of dirt, grease and bacteria on any surface without leaving water marks or stains

HUMAN HAIR & MICROFIBER

Wool is the thickest textile fibre existing in nature size 18-24 micron; Cotton has normally a size of 13.5 micron; Silk is the thinnest natural fibre size 12 micron; Human hair has a size of 300 micron; Microfiber is 100 times finer than a human hair size 3-5 Micron & sometimes even less

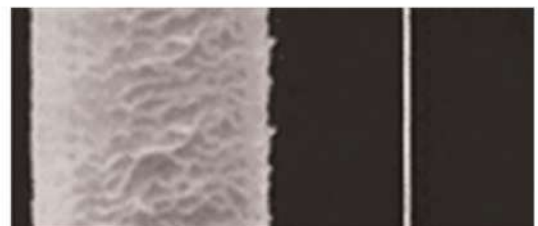

MICROFIBER

NORMAL FIBERS

FEATURES

- # Highly absorbent & quick drying, absorbs seven times its weight in water
- # Good cleaning ability, makes cleaning job fast & easy
- # Non abrasive & lint free, widely applicable for places with high level requirement
- # Eco-friendly, reduces usage of water, cleaning chemical & paper towels
- # Durable & easy to clean, can be used hundreds of times if cared for properly
- # Suitable for allergy & asthma sufferers, as well as anyone with multiple chemical sensitivities

WHAT IS COLOR CODING?

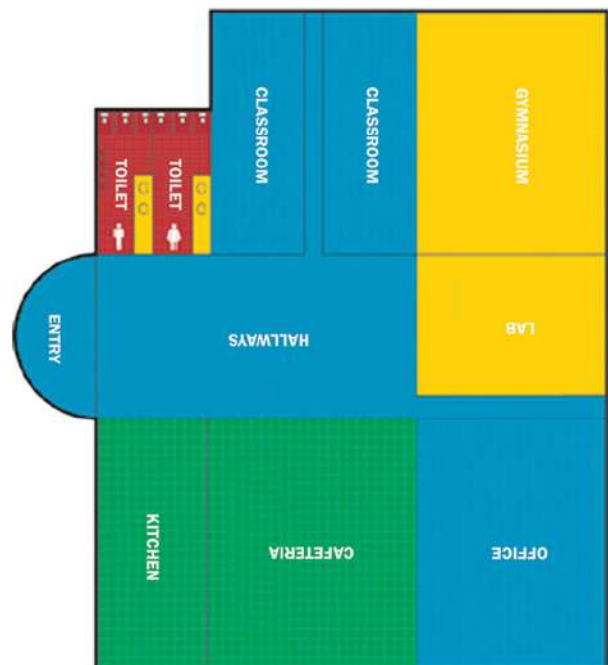

Color coding is the idea of designating particular cleaning products & processes to consistent color schemes. Its purpose is to segregate equipment & procedures in a visual coding system to prevent cross contamination & reduce literacy barrier. Color coding is simple yet very important while cleaning an institution as it helps prevent cross contamination of germs & bacteria, improves employee's performance, increase safety of a property, reduces chemical misuse.

Nearly all industries benefit from using colors to clean, including medical centers, hotels, restaurants, schools, day cares, & nursing homes. A color-coded cleaning program is intended to help you identify different colored cleaning products such as rags, towels, cloths & mops for specific tasks or areas at the facility you clean and/or manage. Within the professional cleaning industry, there are many advantages to developing and integrating color coding into your existing program, including to:

- # Control infection
- # Prevent cross-contamination
- # Differentiate for specific tasks or jobs
- # Identify between departments
- # Help bridge the language barrier
- # Simplify employee training

BRIDGE THE LANGUAGE BARRIER

Color, for all intents and purposes, is a universal language that is recognized by anyone – regardless of one's native tongue. By applying color to your cleaning program, you are breaking down any language barrier that may exist between you and your staff. This is extremely important because it removes the degree of uncertainty, resulting in consistent cleaning from your entire staff.

DIFFERENTIATE FOR SPECIFIC TASK & DEPARTMENTS

Color Coding is Defined by Four Colors Red, Blue, Green, Yellow

High Risk Areas

Suitable for toilets, wc, urinals, sanitary fittings, washroom floors

General Low Risk Areas

Suitable for rooms, offices, corridors, halls, receptions

Food Areas

Suitable for canteens, restaurants, kitchens, cafeterias

Medium Risk Areas

Suitable for pipe works, dispensers, sinks, taps, basins, cubical

BROOMS & BRUSHES

BROOMS & BRUSHES

TYPES OF BRISTLES

PET BRISTLES

Soft & durable bristles, suitable for application where abrasion is to be avoided, flexible bristles efficient for washing surfaces, ideal for soft wiping instead of brushing action

For wet as well as dry use

PBT BRISTLES

ideal for food industries, high resistance to chlorine & caustic cleaning solutions, ideal for pharma industries due to its non hygroscopic properties makes it sterilizable in an autoclave up to 120° C. Perfectly suitable for pharmaceutical & food grade applications

Preferable for wet use

PBT Brush 30

30 cm brush with densely placed PBT bristles perfectly suitable for pharma & food industries as its made with non toxic material autoclavable up to 120° C. Supported handle - alumax super screw

c.n.	PRODUCT NAME	SIZE	BRISTLE
KFGB01	Kibble PBT Brush 30	30 cm	PBT

PBT Brush 45

45 cm brush with densely placed PBT bristles perfectly suitable for pharma & food industries as its made with non toxic material autoclavable up to 120° C. Supported handle - alumax super screw

c.n.	PRODUCT NAME	SIZE	BRISTLE
KFGB02	Kibble PBT Brush 45	45 cm	PBT

BROOMS & BRUSHES

Outdoor Broom

Angular design for perfect angle of contact for soft brooming action. 45 cm strong structure foam heavy block with large bristles. Perfectly suitable for brooming of parking lots & large sweeping areas
Supported handle - alumax ecoline | alumax super

c.n.	PRODUCT NAME	SIZE	BRISTLE
KSOBB45	Kibble Outdoor Broom	45 cm	PET

Sweepie 45

Sweepie 45 designed for sweeping as well as scrubbing of floors, combined of fine & hard bristles. Outside bristles are soft & finer for collecting tiny dust & inside bristles are hard for collecting larger dust.
Supported handle - alumax super

c.n.	PRODUCT NAME	SIZE	BRISTLE
KSBB45	Kibble Sweepie 45	45 cm	PET

Mr. Tall (Broom 30)

Broom with densely placed soft bristles for superior cleaning & long lasting effect. Specially designed bristles for soft sweeping and daily cleaning
Supported handle - SS handle

c.n.	PRODUCT NAME	SIZE	BRISTLE
KBRB30	Kibble Mr.Tall	30 cm	PET

BROOMS

LOBBY DUSTPAN & BROOM

Lobby dustpan & broom with anti-collapse design comes with clamps on handles to attach broom with dustpan, upright pan positioning lock for a comfortable sweeping, strips on dustpan to collect fine dust, two wheels beneath the dustpan for easy maneuverability. PET bristle broom
