Photo Credits:
Many photographs in this book were contributed by photography students and their instructor/co-author Scott Wittenburg at Upper Arlington High School in Columbus, Ohio. This was a unique year-long process where students and their instructor engaged collaboratively in the development of this book by examining the essential learning taking place in each project area then identifying the types of images needed to further the learning along the way. Students shot a variety of photographs as actual course assignments with the most appropriate images selected for publication along with the contributor’s name adjacent to each photograph.

National 4-H Council works to advance the 4-H youth development movement, building a world in which youth and adults learn, grow and work together as catalysts for positive change. National 4-H Council partners with the Cooperative Extension System of the Land Grant Universities, the National 4-H Headquarters at USDA, communities and other organizations to provide technical support and training, develop curricula, create model programs and promote positive youth development to fulfill its missions. National 4-H Council also manages the National 4-H Youth Conference Center, a full-service conference facility, and the National 4-H Supply Service, the authorized agent for items bearing the 4-H name and the emblem. National 4-H Council is committed to a policy that all persons shall have equal access to its programs, facilities and employment without regard to race, color, sex, status, sexual orientation, marital status, disability, physical or mental disability. Mention or display of trademark, proprietary product or firm in text or figures, does not constitute an endorsement by National 4-H Council and does not imply approval to the exclusion of suitable products or firms.

NOTES TO THE PROJECT HELPER

This 4-H project book is designed for youth to explore and complete under the guidance of a Project Helper. This can be a parent, relative, knowledgeable adult, project leader or family friend. The duties of this individual begin with helping the child create and carry out a project plan. This is followed by helping the child Focus on each activity in his/her project plan, providing Support and Feedback for the learning taking place, and conducting Debriefing sessions to determine what was done well, what could have been done differently, and where to go from here.

The information and activities contained in this book are arranged in a unique experiential fashion (see model). In this way, youth are introduced to a particular practice, idea or piece of information through an opening Photo Shoot (1) Experience. Following this, youth take the opportunity to (2) Share what they did with their Project Helper and (3) Process the experience through a series of questions allowing the learner to (4) Generalize and (5) Apply the knowledge and skills gained. Project Helpers also provide encouragement for the learner to extend the experience by taking on one of the Challenge Yourself activities in each activity section.

Project Helper Expectations

- Review the Learner Outcomes (Photography Skill, Life Skill, Educational Standard and Success Indicator) on the lower left-hand side of each activity to understand the learning taking place. Each activity in this book is tied to a specific National Education Standard. See the inside back cover for a summary of these standards along with the goals and outcomes for this project.

- Become familiar with the Background sections and Photo Shoot activities contained in this book. The background information is intended to enlighten the Project Helper as much as the learner. Stay ahead of the learner by trying out activities beforehand.

- Begin the project by helping the learner establish his/her plan for the project. This is accomplished by reviewing and completing pages 4-7.

- Conduct a debriefing session allowing the learner to answer Review questions and share results. This will improve their understanding about what was learned for an experiential perspective and the particular life skill and photography skill that were practices.

- Encourage use of a photo journal or scrapbook to help the learner celebrate what was done well, and to see what could have been done differently. Allow them to become better at assessing their own work.

- Date and initial the activities that have been competed on page 4 of their project plan.

Welcome to Mastering Photography, Book 3!

This is an advanced-level book for a serious study of photography, recommended for youth in grades 5-12. Younger students may need help from a committed adult. It can be completed as a stand-alone project or in connection with another 4-H area of interest. Activities cover four main areas related to photography: Equipment, Lighting, Composition, and Skill Building. Having access to a camera (phone or DSLR) is essential, as well as deciding how and where to store the photos you will take during the project.

Check your county’s 4-H project guidelines (if any) for completion requirements in addition to the ones below, especially if you plan to prepare an exhibit for the fair. This project may be repeated if you select activities that were not satisfactorily completed or attempted in previous years.

YOUR PROJECT GUIDELINES

STEP 1: Explore each of the four Project Areas (Equipment, Lighting, Composition, Skill Building). In each area, complete the Photo Shoot activities (at least 2) of your choice along with the Talking it Over activity.

STEP 2: Take part in at least two Learning Experiences.

STEP 3: Become involved in at least two Leadership/Citizenship activities.

STEP 4: Take part in a Project Review.

OPTIONAL: The Challenge Yourself activities are optional.
INTRODUCTION

By now you have learned the basics of photography and what goes into taking a successful photograph. In Mastering Photography, you will take your photographic skills to a whole new level. It's time to raise the bar and challenge yourself while discovering new ways to go about creating unique images you can be proud of!

Learning how to take advantage of exposure settings will help you make the most of your photo skills and enable you to take the kind of photos that have the “wow factor.” Imagine freezing the motion of a soaring bird in flight, or blurring the motion of a speeding car. Or taking stunning night shots of a city skyline and capturing dazzling fireworks displays. Learning how to set your shutter speed and aperture to document these kinds of scenes will open the door to a whole new world of photographic possibilities.

Other activities you will be working on include shooting silhouettes and learning how to create a photo puzzle in the form of a "joiner.” A joiner involves shooting a series of images that make up the individual puzzle pieces of an entire scene and then joining all the photos together to create one big completed photo puzzle!

Up until now, you have spent the majority of your time taking photos outside using the natural light of the sun as your light source. But outdoor photos are just part of the total picture. Enter the world of studio photography. Did you know that many of the wonderful images you see online and in advertisements were actually shot indoors using artificial light? Studio photography allows you total control of lighting plus enables you to avoid unpredictable, unwelcome factors like a sudden downpour or freezing cold...
temperatures. With little effort and minimal expense, you will learn how easy it is to set up your very own studio at home! Just by using simple photo lights and backgrounds, you can take impressive formal studio portraits. You can even use your home studio to photograph still life objects.

So are you ready to dive in and learn new skills? Great, let’s get started!
YOU TAKE CONTROL – THE MODE DIAL

Letting light into a camera is called making an exposure. The amount of light is controlled by the shutter speed and the size of the lens opening, or the aperture. A camera’s sensitivity to light is determined by the ISO or film speed. Proper exposure for a scene is determined by the relationship of these three factors. You can change these settings of a DSLR camera but most cell phones don’t have this ability. Research your cell phone, looking for a manual setting. Sometimes you can add an app that will allow you to take control of light!

PHOTO SHOOT

1. Go outside with your camera and pen and paper.

2. Set the mode dial to AUTO or Program. As you compose a variety of scenes, look in your viewfinder or screen to see what the shutter speed and aperture is being set automatically for each scene. Take notes of the settings.

3. Refer to your owner’s manual to learn how to set ISO. Set your ISO to 400 and turn the mode dial to M (manual). Set the shutter speed to 1/250 second and the aperture to f8. Take shots of bright scenes and dark scenes at this exposure setting. Take note of how this exposure setting affects the light of each scene.

NOTE: If you are using a cell phone without a manual setting, you may want to consider purchasing a smartphone camera app similar to the one in the diagram. You can learn tips on how to control exposure on smartphones without manual capability in the next section.

The relationship between shutter speed and aperture with regard to light. Each successive setting is considered a “stop.”

Faster shutter speeds = Less light
Smaller aperture = Less light, greater depth of field

Shutter Speed – Shutter speed controls how long light enters the camera. Think of the shutter as a door that opens and closes. The shutter opens and closes at speeds measured in fractions of a second; the higher the bottom number, the faster the shutter speed. Longer exposures involve the shutter opening for seconds, minutes or even hours!

Aperture – Aperture controls how much light enters the camera. The camera lens has an opening that is usually adjustable. The larger the opening, the more light enters the camera. Aperture settings are designated by units known as f-stops.

ISO (or sometimes called “Film Speed”) – ISO controls how sensitive your camera’s light sensors are. The higher the ISO number, the more sensitive your camera is to light.
**BACKGROUND**

**The Mode Dial** – The mode dial controls the different ways you can set exposure. The most important settings are AUTO, P, S (or Tv on some cameras), A (or Av on some cameras) and M. Refer to your owner’s manual to learn how to set shutter speed and aperture for your particular camera model. Here are what the mode dial settings are used for:

- **AUTO or P (Program):** Use either of these settings when you want the camera to automatically set the exposure for you.
- **S (or Tv):** This is the shutter priority setting, used when you want to set the shutter speed manually and allow the camera to set the proper aperture automatically.
- **A (or Av):** This is the aperture priority setting, used when you want to set the aperture manually and allow the camera to set the proper shutter speed automatically.
- **M:** This is the manual setting, used when you want total control over exposure by setting both the shutter speed and aperture manually.

**CHALLENGE YOURSELF AS A PHOTOGRAPHER!**

★ Memorize the mode dial settings discussed here and what each one does. Test your knowledge by talking to a professional photographer.

![This Mode Dial is set on Shutter Priority.](Credit: Scott Wittenburg)

**LEARNER OUTCOMES**

Project Skill: Get to know your camera’s capabilities using the mode dial

Life Skill: Mastering technology

Educational Standard: Anchor Standard #2 Organize and develop artistic ideas and work. VA:Cr2.1.5a Experiment and develop skills in multiple art-making techniques and approaches through practice.

Success Indicator: Creates high-quality photos that demonstrate appropriate use of advanced equipment through practice

**NOTE!** Words in bold throughout this book are defined in the glossary.
A photo shot at the correct exposure of 1/250 second at f8

The same shot that overexposed by two “stops.” A slower shutter speed (1/60 second) or smaller f-stop number (f4) would cause this to happen.

The same shot that is underexposed by two stops. A faster shutter speed (1/1000 second) or larger f-stop number (f16) would cause this to happen.
Here is an exposure setting of 1/250 second at f5.6 as seen through the viewfinder.

The screen on this 25LR indicates an exposure of 1/100 second at f5.6

A screenshot of a smartphone camera app that allows you to make manual exposure adjustments.
