

GENERAL INFORMATION

The Net3 RVI3 can be used for remote video and local programming functions for Eos family control systems, and Mirror Mode remote-video only operation with Element control systems. It provides 3 external displays, which may be standard, single or multi-touch. When used with Ion or Element, only two displays are supported.

FEATURES

- Local control or synchronization with Eos Ti, Eos, Gio and Ion control systems
- Mirror Mode remote-video only with Element control systems*
- Access to all programming functions
- 20 User programmable front panel buttons
- 4 - front panel LED status indicators
- 2U 19" Rack-mount enclosure
- Supports the RFR, iRFR, aRFR, fader wings and Eos programming wing.

INTERFACES

- AC Input (100 - 240 VAC at 50/60Hz)
- Two individually configurable ethernet ports,
- 3 - display port connectors for external displays, standard, single-touch or multi-touch
- USB multipurpose (5 ports)

*Note: When used with Element, the RVI provides only remote displays of what the console operator is seeing and no remote control capabilities. Touch screens are therefore not required when using the RVI with Element. Mirror Mode remote video can also be provided by a PC or Mac computer running the free Element Offline Editor software when connected to the Element via an Ethernet network.
