## OFFICIAL WASHING & CARE GUIDE

### How To Wash Your Diapers In Four Easy Steps

#### STEP ONE: REMOVE THE SOLIDS

Drop poo in the loo and store the used cloth diapers in a dry pail.

#### STEP TWO: PRE-WASH

Run a 100°F - 140°F pre-wash cycle with a mild detergent daily. Do not use bleach. The pre-wash removes the majority of soiling & gets your diapers ready for the main-wash. Store diapers in a dry pail until the main-wash.

#### STEP THREE: MAIN-WASH

Every 2-3 days run a long main-wash cycle at 100°F - 140°F with mild detergent. Do not add bleach, whiteners, boosters or softeners.

#### STEP FOUR: HANG TO DRY

Hang the diaper to dry in shade with the crotch center draped over the line to evenly distribute the weight. Make sure diaper & inserts are completely dry before storing for use.

To maintain the longevity of your Econaps diaper please follow our Econaps care guidelines exclusively.

Do not: Use bleach, fabric softener, whiteners, chlorine bleach, oxygen-based bleaching agents, dyes, perfumes, natural soap, or essential oils. Do not use detergents that contain additives from the caustic substance list mentioned previously, do not tumble dry, do not soak, do not wash in temperatures exceeding 140°F and avoid prolonged sunlight exposure while air drying diaper shells.
