ADDITIONAL INFORMATION

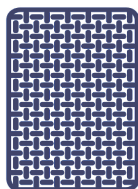

**KLER**

**Opera  
W178**

1. Wooden (American walnut) feet
2. 1,5RPL and 1,5RP0 or 1,5RPP can't be put together due to overlapping control panels between seats
3. RP function always fold electrically by two independent motors
4. In RP function you can use: op. 224 - electric engine with battery
5. Control of recliner elements is placed in the seat on the side, where there is no armrest. Control of headrest is also placed in the seat under the right hand
6. Opening of headrests manually in elements without recliner, or optionally electrically, is controlled by a button placed in the seat. In element 1,5N0 - under the right hand, in 1,5RPL/P - on the opposite side of the armrest
7. Headrests in elements with RP function, placed vertically with maximum deviation, always will be more inclined forward, than headrests in elements without functions. This is due to the fact, that after unfolding recliner, to achieve comfortable position, headrest should be tilted in such way, so that the head is directed upward. Therefore, this effect can't be the basis of complaint
8. Op. 248 - decorative stitching. On armrests and backs there is decorative stitching type „mocasino" which can be made in colour of contrasting thread
9. Without op. 248 - all stitching will be made in colour of upholstery
