Rethink, redesign, revalue  
sums up the sustainable benefit  
of our products.

What and how much do you really need? What purposes should a piece of furniture serve? Experienced consultants and virtual planning tools enable us to support you to create a bespoke and conscious purchase. So that you get exactly what you really need, tailored to your current requirements. But don't worry, once furniture has been designed, it can always be rethought and adapted to new circumstances.

Each piece is unique, planned and assembled especially for you. Our furniture is designed to be forever reconfigured. Thanks to the high-quality finish and clever design, all components can be change and extended at any time without any problems. This leads to limitless creative freedom, more individuality in design and almost infinite cycles of use.

Our vision –  
**becoming a fully circular business**  
We want to extend circularity principles beyond our products. That means adopting this philosophy throughout our company – from our product development to our manufacturing, and new business models, from our communications to our supply chain, operations and the expertise of our people.

Thanks to the high quality, colours that never fade and a 100% modular system, decades-old USM furniture can be seamlessly combined and upgraded with new components. We believe a product that adapts to your style, your life, your changing needs is relevant and loved.

USM furniture is a valuable companion  
for life, across generations.

Our product lines USM Haller and USM Kitos M, accounting for more than 92% of our revenue, carry the Cradle-to-Cradle® certification. It is the leading multi-attribute standard used globally across industries for designing and making products that enable a healthy, fair and sustainable future according to the world's most advanced science-based measures.

All our four main product lines carry the UL Green-guard Certification for low chemical emission. Having undergone rigorous scientific testing to meet stringent emissions requirements, this certification approves that our products contribute to a healthier indoor air quality.

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

We have committed to set the following emission reductions in line with the latest climate science:

- Reduction of absolute direct and indirect greenhouse gas emissions (scope 1 and 2) by 42% by 2030 from a 2021 base year.
- Reduction of other absolute indirect greenhouse gas emissions (scope 3) by 25% within the same timeframe.

(Our target boundary includes land-related emissions and removals from bioenergy feedstocks.)

The Science Based Targets initiative (SBTi) has approved USM's above near-term science-based emissions reduction targets. The highly respected climate action organisation, partnering with renowned organisations including the United Nations Global Compact and the World Wide Fund of Nature (WWF), enables companies worldwide to play their part in combating the climate crisis.

## Application options

A modular structure of your design, either completely or partially equipped with e-Balls and e-Tubes, is connected to a source of electricity. The structure itself conducts the low voltage electricity to the desired location using the e-Balls, e-Connectors and e-Tubes to form a circuit. USB chargers or light sources can be snapped into place in pre-cut recesses. The power supply is drawn from any point near the ground. The power supply cable is attached to an e-Ball, and the power adapter is subsequently tucked underneath the furniture until only the operating switch remains visible. From this point the power supply requires no further cables but rather is integrated into the structure of the furniture.
