

Step 1:

Lightly dust both the Petalear™ and surface of gum paste/fondant (approx. 1/32" thick) with cornstarch using a pounce.

Step 2:

Place the dusted side of the gum paste/fondant face down on the Petalear™, then dust top.

Step 3:

Press gum paste/fondant down into Petalear™. The outline of the flower designs should show prominently. If they do not, the gum paste/fondant is too thick.

Step 4:

Using a fondant smoother, press gum paste/fondant down into Petalear™ starting with light pressure and then pressing firmer. Finish by pressing down and turning the fondant smoother a one-quarter turn. Repeatedly.

Step 5:

Grab the excess gum paste/fondant on each side of the Petalear™ and pull it outwards to separate the sheeted gum paste/fondant from the flowers. Loosen gum paste/fondant between each flower with a needle tool and remove the excess gum paste/fondant.

Step 6:

Press firmly downwards so the gum paste/fondant takes on all the details, then take your finger and press it on the outside of the silicone blade, pushing down firmly in order to create a finished edge on the flower.

Step 7:

Stretch the Petalear™ in all directions to loosen the gum paste/fondant from the Petalear™.

Step 8:

Turn the entire Petalear™ upside down and peel back the Petalear™ from one end to release the gum paste/fondant flowers.

Step 9:

Set the flowers inside of a flower former to dry.
