In addition to the above ingredients we run each product through the EWG's Skin Deep Cosmetics Database. If the search returns any ingredients (whether listed above or not) that are suspected of harming your health we do not carry the product. There are tens of thousands of ingredients used in skin care and we are constantly reviewing the literature and adding to the list above.

*Fragrance is a tricky ingredient because it means there is an undisclosed mixture of scent chemicals and ingredients. As a rule we do not allow fragrances in our products unless the brand discloses the ingredients used and they are verified to be safe.
