### GENERAL USE DIRECTIONS:

**TEE AND GREEN:** For the spoon feeding of tees and greens apply 0.07 to 0.10 pounds of N (6-9 fluid ounces of NanoKommand™) in 1 to 3 gallons of total spray solution per 1,000 ft<sup>2</sup> every 7 to 14 days. Application may be made in conjunction with the turf protection chemical program. Irrigation is recommended following application or before the next mowing.

**FERTIGATION:** NanoKommand™ may be injected during each irrigation at rates of 2 to 3 fluid ounces (0.02 to 0.03 pound of N) per 1,000 ft<sup>2</sup>. Rates will vary in accordance with the irrigation schedule. Use the lower rate in more frequent waterings.

**FAIRWAYS:** NanoKommand™ may be used as the sole nitrogen and potassium source or combined with P<sub>2</sub>O<sub>5</sub> sources for a desired fertilizer blend

for application on fairways. It is recommended that the applications be split to coincide with the nutritional demands of the cultivars present in the fairways and the turfgrass nutritional program developed by the superintendent. Rates may vary from 1 to 3 pounds of N (90 to 270 oz NanoKommand™) per 1,000 ft<sup>2</sup> per growing season.

**ATHLETIC FIELDS:** NanoKommand™ may be used as the sole nitrogen and potassium source or combined with P<sub>2</sub>O<sub>5</sub> sources for a desired fertilizer blend for application on fairways. It is recommended that the applications be split to coincide with the nutritional demands of the cultivars present on the athletic field and the turfgrass nutritional program developed by the turfgrass manager. Rates may vary from 1 to 3 pounds of N (90 to 270 oz NanoKommand™) per 1,000 ft<sup>2</sup> per growing season.
