

Coil Cradle

(Type 4)

Kit contents

- Base (x1)
- Side (x2)
- Bar (x2)
- Planks (x2)

Assembly instructions

1. Decorate

The model comes unpainted. Due to the intricate detail on this model, we recommend painting it before assembly – it can be difficult to reach all parts after assembly. Standard acrylic paints work well and we recommend spraying the model with a primer before painting.

2. Attach the sides

One side of the base has portions cut away on the short sides – this is the **bottom** of the model and the cradle sides need to go on the other side.

Glue one of the cradle sides to each of the long sides of the base. The sloped side should be angled towards the centre of the base, and the right angle should be aligned with the long edge. Cyanoacrylate glue works well for our models.

3. Attach the bars

Each bar should bridge between the two cradle sides. Glue the bars in place on top of the cradle sides so there is one at each end of the cradle.

4. Attach the planks

One set of planks should be glued on each diagonal part of the cradle sides. They should fit between the bars.
