— Edison LED Bulb —

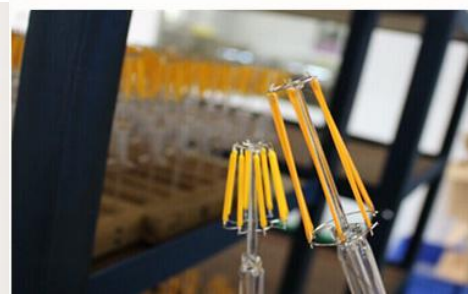

FRANCHISES AVAILABLE!

Call 1300 ALL LED to become a part of our expanding ELS family today!

LED Filament bulbs look just like their traditional incandescent counterparts thanks to a unique new LED technology that allows for very small LED emitters to be arranged in a linear filament style package. These emitters are then powered using a traditional glass insulated circuit similar to that found in a traditional incandescent bulb. The end result is a bulb that functions and looks virtually identical to an incandescent.

The best part is LED filament bulbs can come in all shapes and sizes just like an incandescent. The filament LEDs can even be made with super warm 2200K color temperatures or coated glass to provide a vintage look just like original Edison or Marconi style filament bulbs. These bulbs are perfect for restaurants, high end retail stores, or even homes that wish to show off a fixture where a typical LED just wouldn't look proper.

FRANCHISES AVAILABLE!

Call 1300 ALL LED to become a part of our expanding ELS family today!

Lampshade

High-transmittance
glass cover

Luminescence

New design
360degrees wide beam angle
antique warm lighting

IC chip

Open circuit/short circuit/ overload
open overvoltage/
undervoltage protection,
safer to use

chip

High luminous efficiency LED chip
adopts strip shape in close
contact with the ceramic or
sapphire substrate,
the chip will quickly export
the heat, reduce the chip temperature

Modeling

Innovative design, high-end elegant

Substrate

High thermally conductive substrate,
lowering the temperature of the LED chip
effectively guarantee
the LED light output and light color
stability

FRANCHISES AVAILABLE!

Call 1300 ALL LED to become a part of our expanding ELS family today!
