

Zen Underwater DP-100 4” Glass Dome Port for Canon 8- 15mm with Removable Shade

Congratulations on the purchase of your new Zen Underwater port! All Zen Underwater Ports are constructed from the finest quality optical glass that is multicoated to eliminate flare and reflections. All aluminum parts are hard anodized, making them rugged and impervious to corrosion.

Care & Feeding

We recommend removing the port o-rings from the port for travel. Don't forget to replace the port o-rings before diving!

After diving, the entire system should be soaked in fresh water to dissolve any salt crystals that may have accumulated. After rinsing, blot any water droplets off of the port with a soft terry towel or chamois, and allow to air dry. Water droplets left on the lens can etch the coating in direct sunlight.

When cleaning the glass, use only a microfiber cloth. Do not use any cleaning solutions!

It is recommended that the port sealing o-rings be replaced annually.

Installation

1. Remove the grey o-ring seated directly beneath the shade

2. Push the shade down and rotate the shade counter clockwise.

3. Pull the shade straight off.

Warranty

All Zen Underwater products are warranted against defects from manufacturing or material for a period of one year from the date of purchase. Zen Underwater accepts no liability for any damage to and defects caused by improper use and/or poor maintenance. It is the responsibility of the owner to carefully follow the instructions in this manual. Zen Underwater does not hold responsibility for damage of any nature to any equipment used with or placed inside this port. Zen Underwater accepts no liability for loss of any captured images or the inability to capture images even if due to the malfunctioning of this product. This warranty applies only to products purchased from authorized Zen Underwater Dealers and does not extend beyond the original retail purchaser. Unauthorized repairs or modifications of this product will invalidate the warranty.
