TECHNICAL SPECIFICATIONS
SEDUM LAMP SMALL

WEIGHT
1.7 pounds

LAMPING
120V E12 Base, 7W Max

BULB INCLUDED
Tala Porcelain I - 3W LED - 2700K

MATERIALS
Ash Wood, Borosilicate Glass, Brass

CERTIFICATIONS
Made from UL Certified Components

Sedum (Stonecrop) is a large genus of succulent plants in the Crassulaceae family, known for their ability to store water in thick, fleshy leaves. Naturally thriving in a variety of environments, including rocky coastal regions and arid landscapes, Sedum is particularly well-suited to oceanic climates where wind, salt, and sandy soils dominate.

These resilient plants are commonly found in coastal and maritime settings, flourishing in well-drained soils with minimal water. Species like Sedum acre and Sedum album are especially known for their ability to endure the harsh conditions of coastal cliffs and dunes. Sedums produce flowers that attract pollinators like bees and butterflies.
