Remote Alarm II

Extended security

With the ResMed Remote Alarm II,
it's like you're always at your
patient's bedside.

The ResMed Remote Alarm II provides a practical solution when flexibility and peace of mind are key.

Ideal for both the hospital and the home, the Remote Alarm II lets you work with the security of knowing that you will be alerted with an audible and visual signal if an alarm is triggered on your patient's ventilation device.

Connect it to any Stellar™ or Astral™ ventilator through a choice of extended cables to ensure it's always close at hand.

And for the busy health care professional, it can even be connected to a hospital alarm system to minimize your time at the patient's bedside.

Key features

- Cable lengths range from 2-20 meters to suit your requirements and environment.
- A long battery life and low battery alert is designed to reduce downtime.
- It can easily be connected to a hospital alarm system.
- It's easy to use and install and comes with a wall bracket for easy mounting.
