

# Wind Zero App Updates

New Features in the latest releases of the Wind Zero App

1. Wind indicator enhancements show direction, speed and crosswind value. The arrow is filled based on the ratio of the wind speed to max wind speed. The hatched area on the arrow shows the crosswind component of the wind speed.

2. Wind speed can be set to Miles per Hour (MPH) or Meters/Second (M/S) on the settings page.

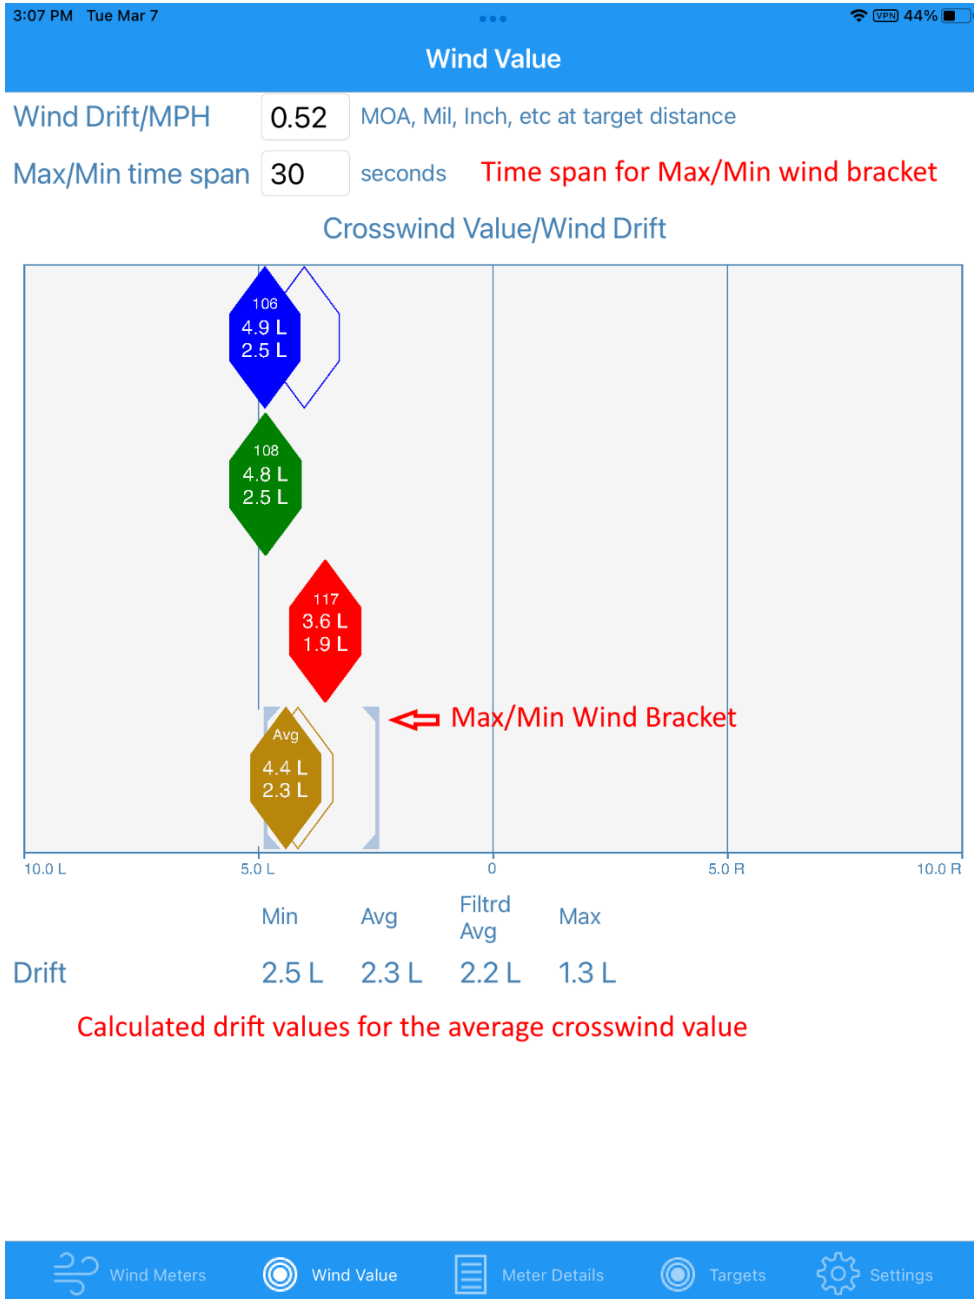

Wind Zero Settings	
Receiver ID	WZT6
Max Wind Speed	15
Base Wind Direction	0
Wind Direction Range (+/-)	90
Wind Value Filter	0.25
Raw Data Filter	1.00
Chart Step Size (pix/step)	2
Wind Speed Units	MPH

Done

MPH

M/S

- The maximum and minimum average crosswind value over the last 15-120 seconds are displayed on the average crosswind indicator. The drift values for the maximum, minimum, average and filtered average crosswind are also displayed. The time period can be set from 15 to 120 seconds.

4. An Advanced option button was added on the Meter Details to handle up to eight active wind meters. Any three of the active meters can be selected to be shown on the other pages.
