

Transportation Cleaning Case Study

- Transportation case study with South Western Railways.
- Successfully trialled with Train Presentation teams across all 3 sub-regions within SWR
- Used as part of cleaning team's onboard equipment to remove spots and stains from seating (smaller issues) and to refresh upholstery (all over coverage).
- Has been able to help the team to maintain and improve overall train presentation, reduce the cost of specialist cleaning and over time has helped to reduce seat cushion replacement costs.
- Initial investment based on standard device cost indicates a payback of less than 3 months
