③

④

⑦

## Kit includes

- Hosepipe Connector ①
- 10 Adjustable "Shrubber Spikes" ②
- 1 Connector 3/4" BSP to 4mm barb ③
- 10 Metres of 4mm micro hose ④
- 4 End bungs ⑤
- 2 Tee-connectors. ⑥
- 1 Filter ⑦

Each "Shrubber Spike" has its own adjustable valve on top which can be used to control the flow of water to each plant. This is done by turning the round knob on top of each spike.

1) Position the "Shrubber Spikes" in planters or directly into the ground.

2) Starting furthest away, cut lengths of the 4mm micro hose to "daisy-chain" them together, leaving a little slack in case you need to move them in the future.

3) Supplied are 2 tee connectors so that you can take tubing to both sides of the Rainwater Terrace.

4) Use the end bungs and a section of micro-hose to close the end dripper.

5) Run the hose to your Rainwater Terrace.

6) Fit the hosepipe adapter to the highest container to get the maximum pressure (refer to other side for fitting instructions) then fit the micro-hose onto the spigot.

7) Turn on the tap on the hosepipe adapter and adjust the individual drippers to the desired flow rate. It is best to start with them all fully closed and unscrew the top on each one until the desired flow rate is achieved.

8) Close the tap when you feel the plants have had enough water.
