Best Practice Advice

GUIDELINE PARAMETERS ONLY - Actual parameters may vary depending on operating conditions

| 1 | Follow guidelines to set correct RPM speed. Incorrect RPM can lead to poor life or tool breakage | 6 | Ensure a debris free surface of sufficient steel thickness for strong magnet hold when Magnet Drilling. |
|-----|--|-------------------|---|
| 2 | Apply firm, steady feed pressure throughout the cut | 7 | Use at highest available Gear setting (for maximum torque) and use electronic tachometer to set RPM at recommended speed (or slower for difficult applications) |
| 90° | Avoid lateral movement or tilting which can cause damage to the tool | 8 | Best countersinking results are achieved using a variable speed drill that allows the correct speed to be set. Use at correct RPM (if unsure use tachometer to check drill speed) |
| 4 | Ensure regular application of quality cooling lubricant, especially when drilling thick or hardened materials. | 9 | Piloted Countersink Bits (like the MultiSink) will significantly increase countersinking performance preventing movement of the countersink whilst drilling. |
| 5 | Hardened or heat-affected materials may requ | ire higher torque | , reduced RPM and feed rates and extra coolant |

Quick Guide

| 1 | Optimum life and performance when used with rotary pistol drills or drill presses | | | |
|---|---|--|--|--|
| 2 | Up to 16.5mm can be used on impact wrench & impact drivers for fast cutting performance | | | |
| 3 | Suitable for harder materials such as stainless steel when used at reduced RPM | | | |
| 4 | Use appropriate lubrication and correct RPM to achieve long tool life | | | |
