💧 WATERPROOF RATINGS:

5,000mm: A base of where a rainproof jacket starts, however in extreme weather condition you will start to get wet.
10,000-15,000mm: Where a waterproof jacket or pants becomes practical in real world situations. These

jackets will weather some pretty serve conditions.
20,000 and up: This is what you are looking for if you are out in all conditions. These jackets will withstand the worse conditions and allow you to stay dry.

🌀 BREATHABILITY RATINGS:

0-5,000 g/m²: Jacket would be fine for light activities, cruising, fishing and general boating. However, may start to feel clammy on warm days,
5,000-10,000 g/m²: This jacket provides a bit more comfort if you were spending a bit of time in your jacket.
10,000-15,000 g/m²: Comfortable

for someone who spend a substantial period in their gear and is active when wearing their gear.
15,000-20,000 g/m² and above: You would want something in this range if you were spending long periods (over-night) in your gear and want that extra bit of comfort.
