

Wooden Wine Rack Connection Instructions

This Brief guide will walk you through the steps required to connect two or more individual Wine Racks together.

Step 1

Unpack your Wine Racks and connect the Timber Pieces using the Plastic ("Y" Shaped) Connector Clips.

These Clips can be used on all Timber Pieces with the exception of the Top and Bottom Row.

Note that it may take a bit of force to connect the two Wine Racks together.

Once the Wine Racks are connected it should look like the image on the right.

Step 2

The next step is to insert the small Metal Pieces into the gaps between the timber pieces. These metal pieces make the gap disappear and allow you to store an additional column of Wine.

Step 3

Once all of the Metal Pieces are in place, clip on the Plastic Neck Protectors. These simply protect the label of the bottle from scratching against the Metal Frame as the bottle is being inserted.

Your Wine Rack also includes a set of Wall Brackets, these are optional and secure your Wine Rack to the adjacent Wall to prevent the whole system from becoming unstable.

We hope you enjoy your Wine Rack. If you have any additional questions with your purchase, feel free to get in contact. Or alternatively, visit our Website at WineStash.com.au for more products, discounts and wine storage tips.

We hope you enjoy your purchase and look forward to helping you store your wine in the future!
