Bio Ethanol Fire Pit Install

Thank you for your purchase of one of our Zinc Fire Tables and Eco Smart Ethanol Burners. These instructions apply to both the Round and Slim models

- 1) Place your zinc fire table in the desired location.
- 2) Open your burner from its packaging and place it in one piece into the hole in the top of the table
- 3) Fill up your provided 5l Jerry Can with the supplied E-nrg Bio Fuel.
- 4) Please then fill up your burner using the Jerry Can provided. For both burners, we recommend for the first time filling these up to the maximum level.
- 5) **ROUND ONLY** - Please insert the Efficiency ring into the Burner
- 6) This is the installation now complete. When not in use with the **ROUND** model, please ensure you put the lid back onto the burner, and for the **SLIM**, please close the flap to ensure water cannot get into the fuel.

How to light the Fire Table

- 1) Remove the lid off the **ROUND** / flip up the metal flap on the **SLIM** burner using the provided lighting Rod
- 2) Using the extended lighting rod, please dip this into the bio ethanol fuel and remove it from the burner
- 3) With a lighter, please light the end of the burning rod and then place the rod back into the burner to ignite the fuel.
- 4) Please note it takes a few minutes for the fire pit to fully ignite and work as it should

How to extinguish the Fire

If you would like to stop the flame:

ROUND - With the lighting rod, place the lid safely back on top of the burner to extinguish the flame

SLIM - With the lighting rod, please flip the metal flap back over the burner to extinguish the flame.
