about the cosmetic product

## FREYJA CBD Cream Eczema

### Clinical application study under dermatological control including Determination of severity of atopic dermatitis (SCORAD)

The test product was applied over a period of 4 weeks by 20 subjects at least once daily or more frequently, if required, on skin areas of the body concerned by atopic dermatitis. After 4 weeks application of the test product a

### Reduction of severity of the atopic dermatitis by 43 %

was determined under clinical dermatological control in mean value of percentage change rates concerning the SCORAD values of the 20 subjects, respectively – 39 % in median. Corresponding 20 results about percentage change of SCORAD values exhibited standard deviation of 29 %.
