

FOR INDUSTRIAL USE ONLY

See Safety Data Sheet (SDS) for more information.

DIRECTIONS FOR USE:

RATES OF APPLICATION:

SITUATION:	RATE: (lbs/100gal)
Use with glyphosate products as water softener, acidifier, penetrant, defoamer and wetting agent.	2-4
Use with Glyphosate products as drift mitigating agent.	4

GENERAL INSTRUCTIONS:

KOMBO 950 LF Adjuvant should be used with non-selective herbicides only, as with some selective herbicides, use may result in loss of selectivity and therefore crop damage.

KOMBO 950 LF Adjuvant is an adjuvant product for use with Glyphosate herbicides.

KOMBO 950 LF Adjuvant components will help the performance of glyphosate herbicides by:

Acidifying the spray water KOMBO 950 LF Adjuvant will acidify the spray solution where alkaline water can reduce the performance of acid based herbicides like glyphosate.

Increasing the spray droplet spread KOMBO 950 LF Adjuvant will lower the surface tension of the spray water, thereby improving spray coverage.

Softening the spray water KOMBO 950 LF Adjuvant will reduce the effects of “hard water” ie. water that contains high levels of free calcium and magnesium ions that can cause tie-up of the glyphosate herbicide.

Increasing leaf penetration KOMBO 950 LF Adjuvant will assist the entry of glyphosate through the waxy cuticular layer on the surface of the leaf and facilitate more rapid and complete uptake of the herbicide into the plant tissue.

Mitigating Spray Drift KOMBO 950 LF Adjuvant will mitigate spray drift when used at 4lb/100gal by reducing the production of driftable fines, hence allowing more spray solution to reach to target, thereby improving herbicide efficacy.

KOMBO 950 LF Adjuvant reduces the production of driftable spray fines by increasing the viscosity of the spray solution. This may reduce fan angle. As such to ensure that double overlap is achieved, adjust boom height at your minimum anticipated spray pressure. A minimum of 4 Bar (60 Psi) at a boom height of 20 inches above the target is recommended.

KOMBO 950 LF Adjuvant increases spray droplet size. As such to ensure through coverage on fine grasses it is recommended to use higher water rates in the range of 8-10 gal/acre. Water rates in the range of 5-8 gal/acre are sufficient if targeting broad leaf weeds.

MIXING: Half fill the spray tank with clean water and start agitation. Add Kombo 950 LF Adjuvant to the spray tank and mix for 5 minutes (10 minutes in cold water conditions) in order to thoroughly condition the spray water. Add all non-glyphosate based herbicides next. Then add the required amount of the Glyphosate based product last followed by the remaining water and mix thoroughly. Always maintain adequate agitation during application and use the tank mix promptly. Always consult the herbicide label for exact application rates of the glyphosate herbicide. Ammonium sulphate may be corrosive to the metal parts of the sprayer. Thoroughly flush tanks, pumps and nozzles with water after use.

CRITICAL COMMENTS

The maximum rate should be used if the Total Water Hardness (measured as CaCO3) is 500ppm or above, if weeks are stressed, or when dust is present. To reduce water evaporation from treated leaf surfaces, the higher rate may also be preferable if ambient temperatures are above 75°F. Please see below under “Mixing” for mixing instructions. Please note the General Instructions below for use to mitigate spray drift.

KOMBO 950® LF*

31006

KEEP OUT OF REACH OF CHILDREN

ACTIVE CONSTITUENTS:

Ammonium Sulfate.....	79.6%
Carboxlic Acid.....	15.0%
Inerts.....	5.4%
Total.....	100.0%

*Patent pending # 16/058,038

An adjuvant product for use with Glyphosate products as:

- Water Softener
- Acidifier
- Penetrant
- Wetting Agent
- Drift Mitigating Agent
- Defoaming Agent

Read Disclaimer on side panel before buying or using. If such terms are not acceptable, return at once unopened.

WARNING!

HAZARDS

Causes serious eye irritation

Kop-Coat, Inc. dba Kop-Coat Protection Products

5137 Southwest Avenue
St. Louis MO 63110
314-772-2200

Contents: 40lb

COMPATIBILITY

Kombo 950 LF Adjuvant is physically compatible with: Surpass 475, Estercide Xtra 680, 2,4-D Amine (62.5% wt), oxyfluorfen (24.0% wt), carfentrazone, metsulfuron-methyl (60.0% wt) chlorsulfuron (75.0% wt), triasulfuron (75.0% wt), triclopyr (60.0% wt), Trifluralin, and fluoroxypr (20.0% and 40.0% wt).

ENVIRONMENTAL HARZARDS:

DO NOT contaminate ponds, streams, rivers or waterways with the chemical or used bags.

PRECAUTIONARY STATEMENTS	
PREVENTION	Wash face, hands and any exposed skin thoroughly after handling. Wear protective gloves/protective clothing/eye protection/face protection.
FIRST AID	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention.
Storage	Keep tightly closed in a dry and cool place. Keep in properly labeled containers. Store in accordance with local regulations. Keep away from food, drink and animal feedingstuffs.
Disposal	Disposal should be in accordance with applicable regional, national and local laws and regulations.

IN CASE OF FIRE

Use: Water spray, carbon dioxide (CO₂), foam, or dry chemical to extinguish fire.

⚠ WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov.
