

Global Reef

PhD / Post-Doctoral
Marine Research Support

Koh Tao, Thailand

INTRODUCTION

Global Reef is a marine research, education and conservation organisation, located in Koh Tao, Thailand. As our name suggests, our mission at Global Reef is to connect a global audience with the marine world, anywhere and everywhere. We are excited to offer a unique opportunity for PhD candidates and post-doctoral researchers to conduct their research projects in the biodiverse marine ecosystems of Koh Tao, Thailand, in collaboration with our experienced team of marine scientists, biologists, and research dive team.

Research Support and Collaboration:

- Diving research facilities: Our research station on Koh Tao provides access to a range of diverse coral reef ecosystems located around the island.
- Logistical support: We offer scuba tanks, boats, equipment, and customized diving schedules tailored to your research needs.
- Experienced Scientific Divers: Our highly trained team of scientific divers, experienced in data collection methodologies, is available to assist you in collecting accurate and reliable data.
- Remote research opportunities: Whether you are on-site or conducting research remotely, our scientific divers ensure the success of your project by following your methods and protocols in collecting and sharing data sets with you. This therefore enables us to facilitate field work for researchers where projects require long term data collection.

Global Connectivity:

Our unique approach enables researchers to initiate, conduct and/or continue projects remotely, with our team providing logistical support and data collection services. Even if researchers are unable to be physically present, our team of scientific divers is equipped to collect accurate data, ensuring seamless integration into your project.

Remote Research Facilitation:

- **Seamless Data Integration:** We can facilitate remote research by providing access to our data collection services and sharing data remotely. This allows researchers to oversee and contribute to their projects from anywhere in the world.
- **Collaborative opportunities:** Whether you are conducting fieldwork on-site or remotely managing your research project, Global Reef offers collaborative opportunities to advance marine science and conservation efforts.

Next Steps:

Whether you're a researcher seeking to conduct project work in Thailand or exploring how our team can facilitate data collection for your research, we're eager to discuss your objectives and how we can support your project. Contact us today to explore potential collaboration opportunities.
